DOMESTIC ARCHITECTURE.

NEVER was a grander field open to artistic developments than is now presented to our architects in Domestic Architecture. This branch of the art is entirely of modern growth. In the palmiest days of Grecian magnificence-the age of Phidias and of Pericles-while such buildings as the Pantheon were being erected for the instruction and astonishment of mankind, the private residences of Athens were mean to a degree that would now shame one of our youngest Western towns. In England, and over the whole surface of Continental Europe, while those gorgeous cathedrals were rearing their noble and awe-inspiring proportions to the sky, the dwellings of the people who frequented them were comfortless and wretched, devoid of all art or embellishment. Art, in those days, was given up entirely to religion, and devoted all its energies to the erection of temples and objects of worship. So rapidly has civilization advanced in later periods of the world's history that only between three and four hundred years ago the highest nobles, and even monarchs, considered as the rarest luxuries what is now within reach of our present mechanics.

But modern civilization has completely changed the aspect of things. By the general spread of education, by the invention of labor-saving machines, and the importance given to mechanical skill, but, more than all, by the gigantic strides of Commerce, the condition of the whole world has been altered. and a new rank in the social order created. Merchants, by bringing the remotest ends of the earth in contact, by exchanging their products, and accumulating into their hands the wealth hitherto wielded only by monarchs or priestly domination, made themselves felt as a power and ultimately obtained the reins of prograss. By them the titled and the privileged wifre humbled and the masses lifted up from therir deep abasement; and many a crowned he ad has bowed before the "merchant prince," foll aid, as humbly as did Antonio to the immerrtal Jew on the Rialto. By uniting themselves with both the higher and the lower

grades of society, the merchants formed the necessary links that now irrevocably bind together the whole modern social system. Under their encouragement manufactures of all kinds sprung up; useful inventions were fostered; literature was diffused; men began to acquire, not only a taste for the comforts and luxuries of life, but the means of obtaining them; and, finally, the fine arts received an impetus they had never done before, in the records of man. During the time that merchants were the leading men and princes in Venice, Florence and Genoa, Italy was the school of art. Under their fostering care Genius seemed to spring everywhere spontaneously from the soil, and flooded the world with wonders that will remain models of art to the end of time. It was equally so with Holland and Flanders, when they were recognized as commercial centres; and when England became the mistress of the world's commerce, we saw again the Fine Arts transport themselves thither, and diffuse themselves among the people to an extent unparalleled in their former history.

But where and in what era of the world has Commerce held such sway, and her "merchant princes" more wealth, power and enlightenment, than in our country at the present time? It is true we are not able to boast of the concentrated glories of hereditary Chatsworths, Balmorals and Holyroods,-for the very genius of our institutions is opposed to such existencies-but, as far more than an offset, where are princely fortunes to be found in such abundance and scattered so promiscuously as over the boundless surface of this continent? Where, in the whole world, can more genuine liberality and legitimate ambition be found allied to wealth? and where can artists be found more absolutely unfettered by conventionalities, in any new field of invention that may open itself to their artistic genius? We repeat that never before was a wider scope presented to the architects of any country than to our own, at the present time, in the display of Domestic Architecture.

That the tasteful appreciation and knowledge of the Fine Arts among our rich merchants and capitalists have not always kept pace with their wealth and liberality is best proved by comparing the results of their outlay with those of their prototypes in the old commercial cities of Italy; by taking many an expensive house in Fifth avenue, for instance, and contrasting them (artistically and inventively) with those of similar cost chosen at random in the streets of Genoa; or by placing one of our any latest and most con-

spicuous specimens of domestic architecture -that at the corner of Thirty-fourth street and Fifth avenue-alongside of any of the thousand marble palaces of Venice, that probably never cost anything near its outlay. Architecture is a thing of cultivation, not of spontaneous growth; with well-recognized principles that cannot be neglected. Not only should our architects be well-instructed in art, but those who employ them should also cultivate a knowledge of it, in order to enable them to choose between good and bad artists, and thus to promote instead of corrupting public taste. We have all the elements in our favor. To say that we have hitherto done the best that we could, in our public and private buildings, would be a sorry compliment indeed to the architects of this country; but we have abundant evidence, from many a genuine work of art among us, as well as the boundless future before us, that the Fine Arts generally-and Architecture especially-are about to start here on a career unparalleled in the annals of the past. With the new impetus created by the demand for costly residences up-town,-especially in the neighborhood of our beautiful Central Park,with the manifest thirst in the public mind for a higher standard of art than that to which we have been hitherto accustomed. and with all the blunders and shortcomings of past efforts to warn us from their imitation, men of even advanced years will yet live to see the domestic architecture of New York rival, if not surpass, in splendor that of any of the proudest old Capitals of Europe.

BOGUS NEWSPAPERS.

One of the greatest frauds upon the business community is the publication of circulars and advertising sheets under the name of newspapers. It is an imposition on the public, who occasionally buy such papers by accident; a nuisance to the business community, who are incessantly canvassed to patronize these humbug sheets; and a clear case of fraud upon the advertisers, who get no return for their outlay. We have one such concern in mind now. Its contents consist (1) of advertisements; (2), of the sales to which the advertisements refer; and, (3), of notices of the sales about to take place as per advertisements, and nothing else. These papers cost next to nothing to get up, and their circulation, too, is limited to the business men who advertise with them. Of course, these fraudulent sheets must get out of the way when a real live paper comes into life devoted to the same interests. It is wisdom for them to die as soon as possible, and to make no fuss about it.

Among the many important transfers of real estate to be found in our columns of this week, may be noticed that of Margaret J. Thomas to H. B. Classin, 10 lots, in 66th st., 275 ft. e. of 10th av., 265x112, for \$70,-000; also 8 lots on 72d st., n. s., 250 e. of 10th av., 204x100, sold by W. Thomas to same purchaser for \$32,000. J. M. Koeler bought of B. Lawrence 16 lots on 2d av., w. s., between 54th and 55th sts., 200.8x200, for \$91,250. The old church property, corner Beekman and Cliff sts., so well known to most of our citizens, has also had to succumb to the march of improvements, and was sold for \$145,000, Mr. Wm. E. Dodge being the purchaser. The size of the lot is 128.5x134.9.

We intend before long to take up the question of Life Insurance, with a view to expose the trickery of that whole business as at present conducted. We believe that more than half the companies in existence are frauds upon the community—that they will never pay the dividends they promise, nor can they pay them; while in many instances we do not believe they ever intended to pay them. No healthy business can afford to pay twenty-five per cent, commission to their agents, as many of these companies do, and deal honestly by their customers. We invite facts pro and con from such of our readers as are interested in this business.

Our friends will be pleased to learn that so far the success of the Record has been very great. We printed two thousand copies of our first number, as the New York Printing Company will testify, and since then our circulation has steadily increased. Business men find it is indispensable.

Wages ought to come down some this spring. They are altogether too high in view of the reduction of the price of everything, save food, compared with the rates of last year. There would be thousands of additional houses put up in this city and vicinity this spring were wages even ten per cent. lower. It is idle to complain of high rents so long as the mechanics insist upon so large a share of the labor fund. Laborers must be content with less if they would secure cheaper homes.

THE NEW PARK BANK.

No building has ever yet been erected in New York which attracted—and justly—more attention and commendation than the Park Bank, now in progress on Broadway near Ann street, and we regret that our limited space forbids that extended description which it merits.

It has a frontage on Broadway of 59 feet 4 inches; running back to a depth of 159 feet, and bending in shape of an L to another frontage on Ann street beyond the Herald Building. The portion fronting Broadway will be five stories high, besides cellars and basement, making a total height of 104 feet from the cel-

lar floor to top of roof. This will be devoted, on the basement floor, to two spacious offices entirely cut off from the remainder of the building, and in the other stories to large and well arranged rooms adapted to Insurance and other business purposes. The Ann street front will be only three stories, besides cellars and basement, and will also be used above the first floor for offices, etc.,—the rooms from both being approached by wide and handsome staircases. The whole of the space in the rear of both Broadway and Ann street front building, will be occupied by a one-story structure for the Great Banking Room,-a superb apartment 90 feet long by 56 feet wide and 40 feet high, covered over entirely by a huge ornamental dome of rich ribbed iron filled with thick plate glass. This room, with all its adjuncts, will be most sumptuously decorated, and in its complete shape will doubtless surpass anything of the kind ever erected among us.

The massive and durable construction of this building in all its parts, from foundation to roof.—its ingenious adaptation to every purpose intended,-and the manifest traces of design throughout, are all worthy of note; but the exterior effect is the feature in which the general public are most largely interested, and this, as far as the design reveals itself, is most satisfactory. The style selected by the architect is the Roman Corinthian, and he has divided the front, which is of pure white Tuckahoe marble, into large and pleasing compartments, by projecting columns and with openings of unusual size and boldness, that give a colossal air to the general proportions of the building, and completely dwarf everything in their immediate neighborhood. In the centre stands the grand entrance door-way, approached by a handsome flight of steps through projecting double columns on each side. These columns extend, in two tiers, two stories high, and terminate in a rich broken pediment garnished with fine sculptured figures of imposing proportions. The enormous windows on each side of the entrance are 15 feet high and 11 feet wide, divided each by a massive mullion surmounted by a bracket-a conceit which had been better avoided-and above these, on the other stories, are circular-headed couplet windows of large and pleasing proportions. The fifth or upper story is to be covered by a handsome Mansard roof, the large central dormer of which will be flanked by caryatid figures, producing a highly pleasing and picturesque ef-

Unquestionably the distinguishing feature of this building is the bold and appropriate introduction of genuine sculpture as a handmaid to architecture. It was this that gave a glory to all the works of ancient Egypt, Greece, and Rome, as well as to all the examples of modern European architecture that most challenge our admiration; and it is really astonishing that our architects should have so long neglected this important feature, squandering money upon the repetition of costly and unmeaning ornamentation that could have been far better concentrated upon two or three pleasing objects of genuine high art. We look upon this conspicuous blending of sculpture and architecture as a new and most important era of art in this metropolis. Although not the first attempt of the kind, it is the first upon a sufficient scale

of magnitude to fix and model rublic taste. The first and most conspicuous effort in this direction was in the "Institute of Fine Arts." at 625 Broadway, erected just before the war, in which the architect, Mr. J. R. Hamilton, boldly introduced the three allegorical figures of Architecture, Painting and Sculpture supporting the arches of his second-story window, and blending in the construction of his edifice. This structure—now converted into a furniture store-attracted considerable attention at the time, and formed a prominent object in that portion of Broadway; but the hint was not followed, and it has been left to the architect of the Park Bank to inaugurate, upon a far more imposing scale, what we fully expect to see henceforth stamp a palatial character upon our civic architecture.

The architect of this very creditable structure is Griffith Thomas; the contractor, Mr. J. T. Smith; the marble masons, Messrs. Maston and Hull; the carpenters, Messrs. Smith and True; and the ironwork, both cast and wrought, by Messrs. J. B. and W. W. Cornell.

WOOD PAVEMENT:—The wooden pavement laid down last Fall in this city appears to have stood the test pretty well this winter, and there is not much doubt it will ultimately supersede the stone in streets where the traffic is not very heavy. The experiments have been confined to the Nicholson pavement. There are several other methods of paving streets with wood, which have been patented. Why not give them all a trial? It is impossible to tell which is the most durable until this is done. Give them, each and all, a fair field and no favor.

THE inconvenience suffered in New York during the recent heavy weather, from the accumulation of snow in our streets, attaches a peculiar interest to a discussion which lately occupied the leading English architects and builders. The sewers appear to them the most convenient place for throwing in the snow. As the heat of the sewage and sewer air is about 70° to 80°-according to the statement of Mr. John Phillips, C.E.—the snow will almost immediately thaw. This opinion derives confirmation from the evidence of Mr. Lovegrove, surveyor to the Hackney Board of Works, who writes, "each shovelful was carried away by the stream and quickly dissolved." Mr. Gadd, road surveyor of Croydon, stating his experience at Brighton, writes, "I needed nothing to thaw it, for long before it had reached the next man-hole it had disappeared." Some other architects, not entirely satisfied that the heat of the sewer would be sufficient, suggest the addition of a small portable boiler to the ordinary dirt carts. in which it is proposed to carry the snow to the shafts.

There can be no question at all of the importance of this matter. We can use no language too strong in insisting on the necessity of our citizens, but especially those interested in real estate, taking proper steps to secure some remedy for the great inconvenience entailed on us all during the winter months. Whether experts will agree with the English architects or not, it is at least certain that some means ought to be devised to quickly ren ve the snow from our thorougfares.

BUILDING in concrete is attracting some trention now in England. The value of concrete has been known from a very early period. It was employed in the construction of the famous abbey of Reading, in which it lasts to the present day, while the stones with which it was

faced have been picked out. In this age it was employed in the construction of the harbor at Dover and the breakwater in Brighton. great strength was recently shown by subjecting a small piece, three feet in length, eleven inches deep, and four and a half inches thick, to a pressure of thirty-six hundred weight The result was entirely satisfactory. It is not probable, however, that it will come into general use unless it can be shown to be far cheaper than bricks. To insure its success two points must be insured: the foundations must be properly secured, and equal care must be taken in mixing the material. The use of concrete in mixing the material. The use of concrete for floors is considered desirable, but many authorities in the matter consider its utilily for roofing questionable. It is right to state, however, that one gentleman warrants that a concrete roof, only two inches in thickness, will remain water-proof for ten years. A builder may object to using this material, as it requires an addition of machinery to his plant, and also to some extent skilled labor. It is maintained, however, that very little experience will make an intelligent workman competent to prepare concrete properly, and that the machinery will more than repay its cost in cases where six or more houses are erected. The rough appearance of a concrete building will have to be concealed by ornamental tiles, or stucco work.

BROOKLYN NEWS.

THE new steam pumping engine, which is about to be constructed at Ridgewood, is to be very highly ornamented, and will have a capacity for raising ten million gallons of water in sixteen hours. Four bids were received in all for the work, viz.:

Messrs. Rogers & Carroll, New York, \$185,000 Messrs. Woodruff & Beach. Hartford, 175,700 Proprietors of the Allaire Works, N. Y., 147,500 Messrs. Hubbard & Whittaker, Brooklyn, 129,750

There is a very wide difference in the bids. Messrs H. & W.'s being \$55,250 lower than the highest, and \$27,750 below the next lowest bidder. Messrs. Hubbard & Whittaker will undoubtedly get the job, as they are in addition to being the lowest bidders, residents of Brooklyn. They state that they have ample facilities for doing the work, and are ready to give all the necessary security for the fulfillment of the contract. It will take about fifteen months to finish the work.

THE Common Council has directed the Comptroller to sell at auction to the highest bidder, the property belonging to the city, comprising over four full lots on Myrtle avenue, between Canton and Hampden streets. The city has had a clear title to it for the last thirty years. It has hitherto been occupied by squatters.

THE Assessment Committee of the Board of Aldermen have taken up the petition of Rosetta Bedell, a daughter of the late John Jackson, which represents that the petitioner is the owner of 71 lots of ground on the Jackson Farm, in the Seventeenth ward, and that the expenses attending upon the nonpayment for many years of city taxes and assessments upon the property are so enormous that she will not be able to pay them, unless the city will consent to receive the taxes only, without default or interest. The Committee agreed to report favorably on the application.

NICHOLAS WYCKOFF, ESQ., President of the Williamsburg City Bank has offered to cede to the city the gore of land on Broadway, between Throop avenue and Gwinnett street, on the condition that no building should ever be erecled on it, but that it should be maintained as on open space at the continuance of the above named streets. The Committee of the Aldermanic Board for opening streets have resolved to report in favor of the city accepting the cession.

In cansequence of the objection of the resi-

In cansequence of the objection of the residents on Brooklyn avenue, the route of the new railroad from Williamsburg to Prospect Park, has been changed so that on leaving Tompkins avenue it will continue on through Fullon avenue to Hudson avenue, thence along

Hudson avenue to to East Warren street, and so on to the Park.

SEVERAL extensive sales of property are recorded in our Brooklyn transfers of this week. Among the most important are one block of 46 lots, bounded by Washington, Milton, L sts. and E. River, purchased by Mr. Jno. Englis from W. Smith, price \$91,000; a piece of property on Myrtle ave., 20.6 e. of Ryerson st., sold for \$76,120, purchased by Ellen Fearn from V. G. Hall; on South 5th st., s. s., 35 ft. w. of 5th st., the property belonging to Meth. Epis. Church, was sold to the Central Meth. Epis. Church for \$20,000.

DOMESTIC ITEMS.

THE winter has been very favorable for Minnesota lumbermen. The cut of logs, this season, is estimated at 70,000,000 feet—38,000,000 on Rum River, and 32,000,000 on the Mississippi.

In the week ending March 14, the sales of real estate in Chicago footed up \$757,098, probably the largest week's work on the city records.

LAWRENCE, Mass., is said to be architecturally one of the most imposing cities in New England.

RENTS in Louisville have declined more than twenty-five per cent. this spring, and yet there are many untenanted dwellings in the city.

THE Kankakee (Ill.) Gazette says 500 new buildings will be erected in that place the coming season

ing season.

The real estate changes in Louisville last week amounted to \$260,000. In New Albany (Ind.) they were \$10,288.

ILLINOIS imported enough lumber last year to build a three board fence twice around the world and once around herself.

TWENTY-TWO thousand dollars have been subscribed toward the erection of a new Wesleyan University at Bloomington, Ill. The building is to cost \$50,000.

THE Albany papers complain that real estate in that city is declining in value. A house that was sold about a month ago for \$5,025 was resold Friday for \$4,500. In Troy the value of real estate is going up all the while.

SOME statistician has counted 42 buildings in course of erection in New Albany, Ind.

THE Mutual Benefit Building Association, of Hamilton, Ohio, filed its certificate of incorporation on Friday. The object is to raise money to be loaned among the members for securing homesteads. The capital stock is \$400,000, divided into shares of \$200 each.

A QUARRY of fine building stone has been discovered on Bulger Creek, 26 miles west of Des Moines, Iowa, on the line of the Chicago, Rock Island and Pacific road. It is said to be equal to the best stone yet developed in the State, and of inexhaustible quantity.

A NEW method of making white lead has been discovered. The metallic lead is first granulated, and then placed in a barrel of beech or hornbeam wood (not oak) with one-fourth its weight of pure water. The barrel is made to rotate about 30 or 40 times in a minute, a current of air passing through at the same time. After the lapse of several hours, the lead will all be oxidized, when a current of carbonic acid is to be substituted, and the rotation continued some hours longer. At the end of this time all the lead will be found connected with the pure hydrated carbonate, the true white lead, and can easily be separated from any unoxydized metal and washed and dried.

THAT valuable piece of property in South Carolina, known as the Kalmia Mills, including 4,259 acres of land, was sold on Saturday, in Charleston, to the Messrs. Langley, of New York, for \$140,000.

THE cost of the original capitol at Washington City was \$1,400,000. The additions, now nearly completed, will cost \$12,000,000.

DURING the ten months last past upwards of fifteen hundred persons in Virginia have been declared bankrupts.

THE master builders of Hartford, Connecticut, have repudiated the Bricklayers and Plas-

terers' Union, and will not hire men belonging to it.

THE new Canadian public buildings at Ottawa, the capital of the dominion, it is reported, have already cost \$2,745,012, and they are not yet completed. To finish them, \$500,000 more, it is said, will be required.

THE bankrupt law has now been in operation

THE bankrupt law has now been in operation about nine months, and during that period there have been filed in New York 2,000 petitions; in Massachusetts, 825; and in Pennsylvania, over 1,200.

THE dirty blue color so frequently seen on dead wood, has been found to depend upon a new coloring matter called xylindein, which is produced by a kind of fungus.

THE lumber season in Maine is reported to have been universally good. More logs were cut and hauled in February than in whole winters for many years past.

In Cedar County, Mo., mines of copper and antimony have been discovered. Rich deposits are expected.

THE Minneapolis (Minn.) Tribune says the lumber trade is opening briskly this spring. The home demand is large, and heavy orders are daily received from points along the lines of the different railroads.

The aggregate building improvements in Toledo for the past year are estimated at two millions, an increase over the previous year of one million. The aggregate number of buildings erected during the year were 1,322, an increase over the previous year of 367. The city has a population of 31,651.

FOREIGN ITEMS.

THE PARIS OBSERVATORY.—The question of the expediency of removing this important establishment to some more eligible place is now engrossing the attention of the Academy of Sciences.

THE total quantity of gold exported from New Zealand from the year 1853 to 1866, inclusive, was 3,059,451 oz.; chrome ore, 5,306 tons, 3 cwt., 2 grs.; coals, 290 tons; copper ore, 2,374 tons, 8 cwt.; iron sand, 161 tons, 13 cwt.; plumbago, 7 tons.

AT a recent meeting of the Clyde Trustees, held in Glasgow, it was resolved to ask for borrowing powers to the extent of £600,000 in the bill for the formation of a new Graining Dock, which the trustees intend to bring before Parliament.

A LARGE new cotton factory is about to be erected in the neighborhood of Quebec, at a cost of \$300,000, and giving employment to fully 3,000 workmen.

A NEW line of telegraph is shortly to be laid from the Tyne to Denmark.

A RAILWAY CARRIAGE, moving with a friction 6lb. per ton, would, if set in motion at the top of a straight plane falling 100 feet, and connecting at the bottom with a straight level line, runs a little more than seven miles by its gravity alone.

THE PIVOT BRIDGE at the crossing of the Alexandria and Cairo Railway and the Nile is 160 feet long, giving two openings of 60 feet each. There are two iron pivot bridges, one at Chicago and one at Galena, which are each 230 feet long, giving two openings of nearly 100 feet each.

ALTHOUGH the roadway of the new Westminster Bridge is of great width, it is not, as has been stated, the widest of any bridge in the world. The Schloss Brucke, at Berlin, has a much greater width of roadway; as has also the new bridge by which the Boulevard Sebastopol is carried across the Seine, in Paris.

AUTHENTICATED facts justify the belief that marine steam-engines will yet be worked with an expenditure of 11b of coal per horse-power per hour. In this case, a vessel like the Great Eastern, working 12,000 effective horse-power, could run seventy days, or to Australia and back, with 9,000 tons of coal, being at the rate of 128 tons a day.

WHEN iron, arsenic or antimony are exposed to the vapor of bromine they enter upon combustion.

NEW YORK JUDGMENTS.

DOMESTIC ITEMS.

IT is now proposed to furnish builders with ready-made walls and ceilings, in the form of slabs, to be used as a substitue for lath and plaster. These slabs are made of cane fibre, a cheap material obtained from the cane of the Southern cane-brakes, by disintegration effected by the explosive force of steam, and costing about ten dollars a ton, which is mixed with clay, rosin, size, and other cheap materials. The cane fibre is also made into paper of various kinds.

An improved pewter is prepared by first melting two and four-tenth parts of lead, and, metting two and four-tenth parts of lead, and, after skimming it, adding one part of tin, stirring the mixture continually with a wooden stick until it begins to cool. The alloy has the density of 9.64, and melts at 320 degrees Fahrenheit. It may be rolled cold, and the plates do not crackle when bent. It takes a good polish, and does not tarnish on exposure. An alloy, made of one-third silver and two-

thirds aluminum, is manufactured into spoons and other articles, which resemble silver very closely, and have many valuable properties, as hardness, lightness, retention of high polish,

etc.
To Stain Wood a Brown Colon. wood is first painted with a solution made by boiling one part of catechu with thirty parts of water and a little soda. After drying in the air, the wood is again painted with a solution of one part bichromate of potassa and thirty parts of water. By varying the strength of the solution, different shades of color can be produced.

A PUBLIC-SPIRITED citizen of New Hampshire proposes to be one of five to build fifteen houses this season, to rent at six per cent. on the bare cost, giving the tenant the privilege of buying and paying what he can, and if he is unable to complete the purchase, refunding him the money paid in, with six per cent. in-

A SILVER WIRE, one-thirteenth of an inch in diameter, it is said will sustain 137 pounds. A wire of lead of the same size will sustain 28 pounds, and a wire of tin 36 pounds.

THE people of Buffalo are to have a breakwater for their harbor, which will require 27,000 cords of stone, and cost \$3,000,000.
CINCINNATI is said to have more houses in

proportion to the number of inhabitants than

Amherst College is creeting the Walker Building in honor of the donor, who gave \$22,000, for the purpose.

There are 90,000,000 feet of logs in the Me-

nominee river. BALTIMORE wants to build a new City Hall at a cost of \$1,000,000.

Hon. John Wentworth, of Chicago, on his return from one of his first sessions of Congress, it is said invested his mileage money in land in that city. He has since sold portions of it for \$400,000; and \$100,000 worth is still left.

THE lumbermen of Hannibal, Mo., expect to sell 30,000,000 feet of lumber this year; last year they disposed of 20,000,000 feet in all.

THE Portland, Mc., papers are advocating the erection of an Opera House. It is pro-posed to have it 190 feet in length, 85 feet in width, and 3 stones high

IowA proposes to build a new State House at a cost of \$2,000,000.

PITTSFIELD is to have a new union depot 200 feet long.

FOREIGN ITEMS.

FROM lack of economy in the reduction of ores, it is estimated that the aggregate loss on the production of bullion in the United States for the past year will reach the sum of 25,000.-000 dollars

In reporting on the preventable diseases of the industrial classes, the "British Medical Journal" calls attention to the condition of certain workers among metallic and mineral dust. The amount of consumption and other lung diseases, caused by the inhalation of irritating particles, is excessive among engineers, machinists and stone-cutters.

A TABLE published in the "Moniteur" shows that the highest price of land in Paris is generally for places in the neighborhood of the Theatres. Near the new Opera House the value of property has risen nearly 100 per

A FRENCH scientific antiquarian has published a work in which he attempts to prove that Solomon's Temple was furnished with

lightning rods.

PLASTER.—An English writer complains that such a really beautiful building material as Portland cement is not used in more common sense ways. As, for instance, in a brick building, if there is wall panelling, the face of the panel might be plastered, and the wall surface would then show the true principle of construc-tion, the panelling being treated with some im-pressed ornament, and, if color be required, tiles or terra cotta embedded in the cement. There would be no practical difficulty in doing this, and the thinnest walls would then be as weatherproof as the thickest, by being covered with this imperishable material—for so it is, if properly mixed and laid. Some of the older timber-framed houses of Chester and Shrewsbury are covered with lime and hair, and a large embossed scale pattern worked upon the face of the plaster. Some nice effects of color are produced in old houses in Kent and Sussex by two coats of different colored plaster, parts of the outer coat being scraped off whilst still wet, and then filled in, thus revealing the pattern by the variation of tint. The prevailing idea as to room ceilings seems to be an elaborate cornice bounding its junction with the wall, and a still more elaborate 'flower' in the centre; and, although this may be a very tasteful arrangement, it does not contain the essence of all that can be done in this feature, and one cannot help wishing sometimes that the ceiling was divided into simple panels; even a simple ribbed moulding would do; a pattern in the centre of the panels, if you can afford it; if not, leave the bed plain. This would give a much greater scale to a room, and would do away with the necessity for so many plaster flowers growing upside down. The eighteenth century fashion of arranging a room with a low skirting, a dado at the height of the chairbacks, and the space below left for panelling or other decorations, whilst the space above may be papered or otherwise decorated, is one which certainly gives great dignity to a room, adding to the apparent height of wall, and, in fact, giving us something else than the eternal paper hanging.

GLASS PAINTING.—Horace Walpole is accredited with the honor of first having brought andient painted glass into favorable notice, but the subsequent elucidation and advancement of the subject is due in a large degree to the labors of Charles Winston, an English amateur in the art, who devoted thirty years of his life to the study of glass painting, published two exhaustive volumes upon that topic in 1857, and died in 1864. Winston's object was to investigate the varieties of ancient glass painting, and to reduce them to a few classes or styles, in the same manner as has been done with regard to Gothic architecture. On the general subject of painted glass, a few brief notes, based on the researches of Mr. Winston and others, may be useful to the student. We are inclined to agree with Mr. Winston in thinking the term "painted glass" the more correct expression than "stained glass." For a glass painting, as he observes, may be entirely formed of painted glass-that is, glass painted with an enamel color—but it would be impssible to execute a glass painting merely by staining the glass. Most glass paintings are formed by combining the two processes of enameling and staining; and, moreover, as regards color, the same general principles apply to glass painting as to any other. Our great teachers, the Egyptians, were acquainted with the art of glass blowing upwards of three thousand years ago. They made glass both white and colored, opaque and transparent. The exact date of the application of glass painting as an art is uncertain, but we know that it was in vogue at least as early as the tenth century. The different varieties or the tenth century. The different varieties or styles of the art which have successively prevailed in this country have been arranged under There is, first, the Early English, five classes. which extends from the date of the earliest specimens extant to the year 1280. Then followed the Decorated style, which flourished for the next hundred years. One of the most distinctive features of this style is the natural form of its foliaged ornaments. It was superseded by the Perpendicular style, but the exact date cannot be fixed with certainty, the change being a very gradual one. The Perpendicular windows, however, are easily distinguishable from the Decorated, by the form of their details, the greater breadth and delicacy of their coloring, and their more refined and finished execution. Mr. Winston assigns about a century and a half as the period of its duration, being of opinion that it terminated with the use of Gothic ornamental details about the year 1530. This, in its turn, was succeeded by the Cinque Cento style, so called from the ornaments of this style of glass painting resembling those of the Italian architecture of the sixteenth century. It prevailed for about fifty years, or until the introduction of the "Mosaic Enamel mode" of glass painting, about the middle of the sixteenth century. This style is middle of the sixteenth century. considered more ornamental and less severe in its character than the Perpendicular, though the early Cinque Cento examples bear so striking a resemblance to the contemporaneous Perpendicular windows, that it is not always easy to distinguish them. The change in this case also was very gradual. The decade between 1525 and 1535 Mr. Winston calls the golden age of glass painting, the gorgeous Cinque Cento style having then reached its perfection. The Intermediate style has dear from the middle of termediate style he dates from the middle of the sixteenth century to the present time. This style, from its long duration, includes many varieties. These the author of this work classes under two heads; the first comprising the glass paintings executed between 1550 and the revival of the Mosaic system, which took place some forty or fifty years ago; the second those which have been executed since that period.

A NEW INVENTION IN RAILROAD IRON.— On Wednesday the 18th inst., a large party of the most prominent railroad men of the West were invited by Mr. J. C. Hilton to visit the Union Roilling Mills on the south branch of the Chicago River, to examine and test the new com-

bination of steel and iron which Mr. Wm. Leighton has invented, and which he claims will obviate the difficulty hitherto experienced in the use of rails made wholly of iron or steel; the ordinary iron rail is too soft to stand the wear and tear of active travel, its average durability is about five months. The celebrated steel rails overcame the difficulty, as far as presenting a good hard surface was concerned. atmospherical influence in winter causes them to crack and fly, and it is found that they can-not be depended upon in that season. The difficulty arises from the fact, that the steel rails are formed of cyrstallized metal, and are consequently not so tenacious as wrought iron, which is fibrous. A judicious combination of steel and iron, such as Mr. Leighton has invented, may probably overcome the difficulty. His combining the two metals is as fol-The steel is shaped like a V, upon which is placed a saddle-piece of iron made to fit it, and upon these are piled other pieces of iron, five layers in all-forming a mass seven inches wide, eight inches high, and seven feet long; the whole is then placed in the furnace at the bottom, to prevent decarbonization. In one hour the mass is taken out, passed through the Rolls, and presto, out comes a perfect rail, so arranged that the steel is made to pass round the head of the rail, so as to form a perfect clamp, immovable from the rail in case the welding should prove defective.

The examining committee, after witnessing the process and the tests, were so thoroughly satisfied, that they requested Mr. Leighton to place some rails on the line of the Chicago and North Western Railroad, where it will be subjected to the fluctuations of temperature, and will be reported upon by the officers of that road, at a future day. Mr. Leighton is entitled to distinction for his ingenious method of combining the metals, and worthy of all praise for his perseverance; but he must not be too sanguine of complete success—it is possible that the face of the rail may batter down and chip on the edges, as steel-faced hammers often do.

FOREIGN ITEMS.

MUCH dissatisfaction is expressed with the architectural designs at the Royal Scottish Academy's exhibition. A survey of the designs convinces our writer that architecture in Scotland is in a backward state.

A London publication argues that, to insure the complete incombustibility of structure, it should be composed altogether of fire-proof material; and says that in the construction of the roof, there should be an under-sheeting of iron to make it fire proof, as roofs are more capable of extending fire than any other part of the building.

The annual meeting of the Architects' Be-

THE annual meeting of the Architects' Benevolent Society of London, showed the receipts of the year, including the amount carried forward from the previous account, to be £366, and the disbursements, £319. Fourteen applicants had been relieved during the year, and eighteen new members joined.

THE official residence of the new Lord Mayor of London has been repaired at an expense of £3,000 and was under the supervision of the city architect, Horace Jones.

THE subject of washing public buildings is attracting considerable attention in London. St. Paul's Church, Covent Garden, has recently had one of its fronts washed by a new Parisian process, which consists of forcing a jet of water warmed by steam against the smoke-hued stone, and so, with the help of a scrubbing-brush, removing the dirt.

The elm-piles under the piers of London Bridge have been in use more than 700 years, and are not yet materially decayed.

Beneath the foundation of Savoy Place, London, oak, elm, beech, and chestnut piles and planks were found in a state of perfect preservation, after having been there for 650 years.

While taking down the old walls of Tunbridge Castle, Kent, there was found, in the middle of a thick stone wall, a timber curb which had been enclosed for 700 years.

A GERMAN engineer states that oxide of chromium is the best substance for polishing steel. The article can be easily prepared by heating bichromate of potash to redness. It is also used for painting on porcelain.

THE Building and Land societies of London, generally, show a prosperous condition. The receipts of the Bradford Third Equitable Benefit Building Society, increased from £202,851 in 1866 to £231,647 in 1867; members increased from 3,711 to 4,090, and the shares from 10.126 to 11.772. The receipts of the Leeds Permanent Benefit Building Society in 1867 were £203,-147 10s. and the payments £211,032 5s. The number of new members, 2,043.

number of new members, 2,043.

THE extended use of alkaline silicates in Germany for the preservation of building materials, both stone and wood, is attracting attention abroad. The cost is but small, and the immunity it gives from fire is complete. According to the expired, and almost forgotten, patent of De Wylde, the woodwork is first saturated with a very dilute solution of silicate of potash, as nearly neutral as possible, and, when this has dried, one or two coats of a stronger solution are given. When lives are lost by fire almost daily, it seems strange that such means of protecting wooden staircases and flooring should be neglected.

THE new transparent cement, which has been called "coaguline," is said to be rapidly growing into use as an article of commerce and scientific application. Its adhesiveness and tenacity are remarkable. Glass, leather, wood, stone, ivory, bone and minerals can be pieced and joined by it, and so tenacious is it that it will resist a strain of 224 hs. or more. Heat or cold, fire or water, are successfully resisted by coaguline, and so far as its durability has been tested the cement is perfect. For piecing glass or crystal its uses are admirable, because its transparencyrenders the junction imperceptible, and its adhesiveness, in fact, makes the broken glass or crystal as good as new.

THE experiments now in progress at Woolwich Arsenal on the manufacture of gas from a mixture of Trinidad bitumen and coal remind us of the recent use various waste materials for the purpose in Germany. Among these are the residues of the manufacture of paraffin, and the refining of petroleum oils. With each of these refining of petroleum oils. With each of these materials a large quantity of permanent gas of a highly illuminating power was procured. other substance experimented with was the waste grease from the woollen manufacture, which yielded a smaller amount of gas. From a review of all the experiments, however, it is concluded that the use of bituminous oils, in combination with coal or peat for the production of gas, offers no advantages, as regards price, over ordinary coal gas. In small works it may be profitable when manufacturers use up their own waste products.

MARKET REVIEW.

BUILDING STONE.—There is a fair amount of trade doing in dressed stone of the various descriptions, but for the rough stock we find rather a quiet market, cutters being as yet unable to decide as to the amount required for the coming season. Most of the quarry companies have fixed their rates or are about doing so, and with some agents already in town, it is likely that contracts will soon

begin to be made. We insert a table of quotations for standard work, but for fancy figured, or complicated patterns it would be impossible to give any comprehensive

BRICK.-During the past week the arrivals have been very large from all quarters, and at the present writing the supply offering is liberal. Prices are without any decided decline, but the market exhibits very little strength, and in order to effect sales easily some shading in buyers' favor has taken place. Manufacturers hold out for high prices with considerable tenacity, but they cannot withstand the influence of the plentiful supplies, both present and proslective, which, being well distributed among the various dealers, opens competition and enables builders to take advantage of any disposition that may be shown to realize. The weakness has been most noticeable on the common hard brick, fronts holding their own with comparative steadiness

CEMENT.-The supply was quite sma dullring the past two or three months, but manufacturing has again been resumed, and stock will soon begin to come forward with more freedom, the first cargoes of the season having arrived during the week. No immediate accumulation of stock is looked for, as receivers calculate that it will require at least a month to fill back orders. The amount manufactured and consumed last year was 950,000 bbls. The prices for the present season have been fixed at \$1 65 per bbl. for Rosendale, delivered on board vessel at Rondout, and \$1 75 do. do. at New York. Roman Cement is occasionally called for, but so seldom as to make it nearly a nominal article. The last sales were at \$9 00 per bbl. in a jobbing way.

FOREIGN WOODS.—The supply of no one description is large, but still there is plenty offering to meet all immediate necessities, and at about previous figures the market remains steady.

GLASS .- For window glass of the various sizes there is a very fair demand, though at the moment the mediums appear to attract rather the most attention. Dealers are not pressing sales, and the market has a steady tone. Two cargoes of French have recently arrived in a very badly damaged condition.

HAIR.-A good, steady business is doing; but on the common grade, or cattle hair, prices are lower by about 5c. per pound. Mixed and good hair are unchanged.

LIME -Receivers are still asking and obtaining about former figures, and a very fair amount of business is doing. The arrivals, however, have of late been quite free, and the stock is evidently accumulating, though there is a disposition manifested at the moment to give no estimates as to the probable amount here. The supply is composed almost entirely of Rockland; and no Glenn's Falls is looked for until the end of this month. The Rockland lime has become the favorite in this city, and is now almost universally used, while the Glenn's Falls, though of whiter color, has less strength, and finds most favor in the suburbern towns.

LATH .- The supply is fair, though not unusually heavy, and with a steady demand prices are sustained. We note sales of 1,300,000, mostly at \$325, though some are said to have been sold at a trifle easier rates. The annual consumption is estimated at about 100,000,000.

LUMBER.-There has been a trifle more life at the yards during the past week, but, as a general thing, the market shows no activity worthy of special note. Dealers appear to be looking for a very good season's business, and the majority have a rather large though well-assorted stock on hand; but, unless trade picks up pretty soon, buyers must gain some advantages-the natural result of a dull market being to shade somewhat on figures, no matter how strong the reasons for holding out firmly. No important cargo sales are reported, and, in fact, they have scarcely begun to move as yet, at the Eastward, the very severe winter and late spring operating unfavorably. From Albany a few vessels are en route, and we hear, while writing this article, of an arrival at this point of a load of black walnut flooring seven-eights to two inches in thickness. From this time forward the receipts will probably slowly but gradually increase, and as the weather becomes more open and settled, we hope for a corresponding increase of the demand. In the Western markets business appears to have opened quite lively; and from Chicago we learn that the lumber trade is gradually but surely improving, and, at former figures, dealers experience little or no difficulty in consummating sales, the aggregate of transactions footing up large. At latest dates the demand was principally for common stock, of which but a small supply was on the market. The Saginaw Enterprise of the 27th ult. remarks:

"We learn of a sale of 500 M feet of green lumber, yes-

terday, at \$5.50, \$11.50, and \$85, to Chicago parties; also, a sale at Bay City of 3,000,000 feet at \$5 50, \$11, and \$35, to Eastern parties; also, a sale of 4,000 feet of day lumber at \$6.50, \$13. and \$38 for culls, common and uppers to Buffalo parties. There is but little, if any, dry lumber now on the river unsold."

The exports from this port for the week have been unimportant.

The receipts of lumber for the year 1867 were as follows: At Chicago, 851,746,000 feet; Albany, 386,883,955 feet; at Troy, 195,478,600 feet; at Bangor, 184,926,708 feet; at St. John, New Brunswick, 213,186,490 feet. Total 1,832,221,753 feet, which was quite an advance over 1866 though it is thought that this year's production will in the aggregate be lighter.

The exports from this port for 1867 were 20,934,743 feet, including 5,631,383 feet to Argentine Republic; 796,395 feet to Africa; 165,923 feet to Antwerp; 2,678,314 feet to Australia, including N. S. Wales; 1,434,000 to Brazil; 1,480,568 feet to Cuba; 121,992 feet to Central America; 4,257,420 feet to Cisplatine Republic; 95,368 feet to Chili; 472,554 to Canary Islands; 569,339 feet to China; 16,500 feet to Egypt; 11,000 feet to Gibraltar; 16,500 feet to Guiana (British); 575 527 feet to Hayti; 27,076 feet to Hamburgh; 109,294 feet to Honduras (British), 38,319 feet to Japan 258,770 feet to Mexico; 301,410 feet to New Grenada; 53,900 feet to New Zealand; 663,711 feet to Peru; 274,139 feet to Porto Rico; 49,775 feet to Dutch West Indies; 90,280 feet to Danish do.; 18,098 feet to French do.; 698,185 feet to British do.; and 94,052 feet to Venezuela. The Portland market is at present very quiet, but prices steady. The latest quotations were as follows:

Spruce Shingles 2 50@3 00.

METALS.—Tin plates are without much activity, and the tendency of prices rather in favor of the buyer, though no actual decline can be quoted. Lead is selling to about the usual extent at 10 %c. for Bar, and 12c. for Sheet and Pipe. Zinc continues in very light supply, and with a good demand former rates are sustained; one or two lots Sheet having been taken at 11 1/2011 1/2c.

NAILS.—Cut have sold rather slowly, as the supply is ample for all immediate wants, the market shows some signs of weakness, large parcels being quoted at about 51/4 @ 5¥c. ₩ lb.

PITCH.—There has been a fair demand for city, with sales at \$3.374 in yard, and \$3.50 delivered.

PAINTS AND OILS .- The demand continues good for all grades of paints, and we note strong, steady feeling on most kinds. The stock of white lead has become greatly reduced, and many manufacturers are selling ahead of production. Linseed oil is in good demand, and prices generally well sustained. We hear of several large sales at \$1.17 @ \$1.18 in casks and \$1.20 @ \$1.21 in barrels, but retail lots command higher rates. For April delivery nearly 20,000 gallons have been sold at \$1.20 % gal.

SLATE.-The season thus far has been rather dull, though, as a general thing, dealers seem sanguine of an early improvement in business. Scarcely enough is doing at the moment to affect prices, and we make no alteration in our figures. The supply now on hand at this point is ample for any ordinary demand, and before any serious reduction takes place it is hoped that fresh stock will begin to come in. This, however, will be regulated in a great measure by the amount of skilled labor offering; and to supply deficiencies quite a large number of Welsh workmen are now being imported. Of old stock at the quarries the supply is larger of the common grades than for the past four years, while good grades, on the contrary, are in very light supply. This may be partially accounted for by the fact that every year developes a more thorough knowledge of quality on the part of buyers; and slate that would formerly have been taken as good on the mere statement of sellers is now thrown out, and something better insisted upon. Pennsylvania furnishes us with the finest stock, and Vermont with the poorest, though some of very good quality comes from the latter State.

SPIRITS TURPENTINE.—In view of the comparatively small supply on hand, and the probability that we shall receive none of the new crop until the middle of May at least, holders have advanced their views considerably, and are pretty firm at the improvement. The postponement of the removal of the tax also tends to strengthen the market. At the improvement buyers are operating only in lots to suit immediate wants; and in small lots the sales making were at 66 @ 68c. Exports 88 bbls. for w 2,399 since Jan. 1st, and 7,077 same time '67. Imports 1,065 bbls. for week, 8,230 since Jan. 1st and 8,575 same time '67. Stock 2,820 bbls.

TAR .- The demand is good for all grades, and prices emain steady, though in some few instances holders have seemed rather more inclined to realize. Sales of North County at \$2.874 @ \$3.00 \$2 bbl., with small lots at \$3.25. Wilmington at \$3.00 @ \$3.50, and very choice thin do., delivered, at \$3.75 @ \$4.00. The stock on hand is 2,283 bbls., against 4,766 bbls. same time last year, and 14,516 same time 1866. The exports for the week were 63 bbls., for the month of March, 248 lbs., since Jan. 1st, 1,663 bbls., and same time 1867, 662 bbls. The imports for the week 875 bbls., since January 1st, 4,985 bbls., and same time 1867, 5.120 lbs.

REAL ESTATE MARKET.

The heavy auction sales seem to be over for the season. There is as large an attendance at the Exchange Rooms as usual, but the bidding is spiritless to what it has been. It is supposed that about one-third of the reported sales are bona fide; the others are to establish a price or to prevent property from being sacrificed. We do not give detailed reports of these sales because (1) they are not reliable, as will be seen by the above explanation, and (2) because they are already done to death in the daily press. We give what no daily or any other paper can give, and hence furnish our readers with exclusive news.

MAINE LUMBER MARKET.

MAINE LUMBER MARKET.

On account of the rain and thaw of two weeks since, the amount of lumber cut this winter on the Penobscot will be very much diminished. Teams have usually remained in the woods, and done good bushness until the tenth of April, while this year nearly all the teams have already been obliged to come out. On the west branch of the Penobscot there are not over eight inches of snow, where there usually are four or five feet at this season. It is said that there will be a fall short of eight million feet on the west branch from the amount anticipated, and that on the Mattawamkeag and the Passadumkeag there will be from ten to fitteen millions short. There were cut last year on the Mattawamkeag seventy-seven million feet of logs, while this year the amount will be twenty-eight millions or less—a deficit from that source alone of forty-nine millions. In addition to this, owing to the small amount of snow to feed the brooks, some of the drives will be in danger of being hung up. danger of being hung up.

TOLEDO LUMBER MARKET.

Tolebo, March 28, 1868.

TOLEDO, March 28, 1868.

The shipments of the foregoing articles by Canal and C. & T. R. R. are shown elsewhere, but they include but a very small portion of the quantity shipped to the interior; the Wabash and Michigan Southern Railroads transporting large quantities, but the figures we cannot obtain.

TO CAPITALISTS.

LARGE PARCEL OF PROPERTY FOR sale on Broadway, below Wall street.

ALSO, FOR SALE,

A new 5-story marble building, 50x100, in Walker street. Rented for \$25,000. Price \$180,000.

ALSO, FOR SALE, A fine Broadway store, well rented.

ALSO, TO LEASE,

A Broadway lot, east side, 50 feet, south of Howard street, 30x98, to lease for 21 years at \$10,000 ground rent.

ALSO, FOR SALE,

A 50 feet front corner house in 5th avenue, below 14th st.

ALSO, FOR SALE,

A first-class full-sized house and lot, with extra lot and stable, in 5th avenue, below 14th street. \$125,000.

All desirable investments. Inquire of

HOMER MORGAN,

2 Pine street.

FOR SALE AT A BARGAIN. FOR SALE AT A BARGAIN.

A neat, handsome, well-located brick cottage in Orange, New Jersey, for sale for something less than \$8,000. It is handsomely furnished, but of course, the furniture, if needed, would be extra. The lot is 75x140, and is filled with shade and fruit trees. A fine barn and tool-house go with the property. The house has thirteen rooms, and is very convenient. Business, compelling the present owner to come to the city, is the only reason for selling. It is about five minutes walk from either the Orange or Brick Church Stations. For particulars inquire at house, Elm street, near Hillyer (yellow brick cottage), or of D. G. Croly, World office, N. Y. City.

MARBLE MANTELS.—A LARGE STOCK on hand, all ready for setting up in buildings, which must be sold in the next 30 days at any price, on account of rebuilding.

A. KLABER,

134 East Eighteenth street, near Third avenue.

A RTESIAN AND PETROLEUM WELLS.—
The Great Earth-Boring Machine is now sinking an artesian well at Mott Haven, opposite the Harlem Railroad Depot, and the public is invited to witness its operation. This machine will bore a true and perpendicular hole, from 9 to 24 inches diameter, to a depth, if desired, of 3,000 feet. Further particulars on application to the Earth-Boring Machine Company, 126 & 128 Chambers street, New York.

S EALED PROPOSATS WILL BE RECEIVED by the Committee on Parists Dy the Committee on Buildings of the Board of Education, at the office of the Clerk of the Board of Education, at the office of the Clerk of the Board of Education, corner of Grand and Elm streets, until WEDNESDAY, the 1st day of April next, at 4 o'clock r.m., for altering and repairing the building, etc., on lot No. 174 Mulberry street, hear Broome street. Plans and specifications of said alterations and repairs can be seen at the office of the Superin tendent of Buildings and Repairs, No. 146 Grand street, third floor. Two responsible and approved sureties—whose names must accompany the proposal, for the faithful performance of the contract—will be required from the successful bidder. The Committee reserves the right to reject any or all the proposals offered, if deemed for the public interest to do so.

o do so.

SPECIAL ANNOUNCEMENT:

The "REAL ESTATE RECORD AND BUILDERS' GUIDE" is published every Saturday at No. 37 Park Row, Room 31. It furnishes the following information:

- 1. All the Real Estate Conveyances during the week in New York and Kings Counties, with the names of buyer
- 2. All the Mortgages entered for the same period in New York and vicinity. in de mari Mai di di mai di
- 3. The Judgments entered in the two counties against delinquent or unfortunate debtors.
- 4. A list of the recent bankrupts throughout the United
- 5. Full information respecting the local real estate market.
- 6. A complete and accurate report of the market for building materials.

With one exception (real estate) all the above are new features in the newspaper business. It is a singular fact that so far the great building interest of the nation has been so inadequately represented in the periodical press. This Record, therefore, is indispensable to the following occupations: - กับ ทั้งที่ โดยที่ ที่ (กับ การ

Architects, Lumber Dealers, Auctioneers, Lime Dealers, Builders, Merchants, Brick Makers and Dealers, ... Metal Workers, Bankers. Marble Dealers. Bill Brokers. Paint Merchants, Contractors, Plumbers. Cement Dealers, Planing Mills, Glue Dealers, Plaster of Paris, Hardware for Houses. Real Estate Owners, Hair. Slate Dealers. Insurance Interest, Window Glass Dealers

and a large number of kindred occupations. General advertisers will see the value of the RECORD as a business
