NEW YORK, AUGUST 1, 1914

CONSOLIDATION CITY OF DEPARTMENTS

It Is Believed To Be Impending—Intimated by Counselor Elkus of the State Factory Investigating Commission—The Revision of the Labor Law Not To Be Extensive.

D ISAPPOINTMENT is being expressed in business circles where reports have been heard that the revision of the Labor Law, and especially the factory regulations contained there-

the factory regulations contained therein, may not be as radical as the public has hoped for and expected.

During the week intimations have come from semi-official sources that as a result of hearings held here and elsewhere the committee is of the opinion that only a few changes of importance are needed in the law. It is understood that Counselor Elkus contends that the only principal changes should be, first, an enlargement of the powers of the Industrial Board, and second, a better definition for the term "factory" as used in the law.

It is presumed that a statement as to the nature of the amendments to be introduced at the next session of the Legislature will be made in time for ample consideration by the interests affected. Regarding a related subject, the over-inspection of buildings, Mr. Elkus made the following statement to a representative of the Merchants' Association:

"We have found that one of the chief

made the following statement to a representative of the Merchants' Association:

"We have found that one of the chief causes of complaint is the multiplicity of inspections. There are now five separate building departments in New York City, one for each Borough. Each has a different Superintendent at the head and a different set of employes, making possible five different ways of interpreting the law. The Bureau of Fire Prevention has to do with matters relating to the fire hazard in both old and new buildings. The Health Department has jurisdiction over buildings for the most part in so far as they are used as bakeries or food product manufactories. The Tenement House Department has jurisdiction over tenements. The Department of Electricity, Gas and Water Supply has jurisdiction over the installation of electrical apparatus and equipment, and the Police Department issues licenses after boiler inspection. Finally, the License Bureau must inspect and license theatres, moving picture establishments and so forth.

A New Building Department Proposed.

A New Building Department Proposed.

"The Police Department, the Fire Department, the Law Department, and the Tenement House Department have Department, the Law Department, and the Tenement House Department have jurisdiction over the entire city. The Commission is considering whether it would not be advisable to consolidate practically all the various jurisdictions over buildings, so far as they relate to construction and alterations, in a Building Department for the entire city. The powers of the State Labor Department with relation to buildings would be transferred to the new department, together with those of the Fire Prevention Bureau. It is a question how far the jurisdiction of the Health Department and the Tenement Department should be merged in the new department.

"The advantage of this plan is that it would bring about uniform interpre-tation and enforcement of the law,

COMMISSIONER ADAMSON.

reduce the number of inspections, and undoubtedly save a large sum or money for the city.

Advantages of Consolidation.

"The commission is now working on

"The commission is now working on several alternative plans along the same lines. These will be submitted for criticism and suggestion to all persons interested at an early date.

"The commission failed to find substantiation of the complaint that the various departments are issuing conflicting orders, and it also failed to discover any case in which a manufacturer intends to leave the State because of the enforcement of the factory laws."

From the foregoing it is inferred that the committee still holds to the opinion that public dissatisfaction is not so much directed against the Labor Law itself as against the methods pursued in administering it, and that irrespective of what the city authorities are doing to co-ordinate inspection work, the State Factory Investigating Commission is planning radical changes in local organizations in expectation, doubtless, of assent and cooperation from the city auizations in expectation, doubtless, of as-sent and cooperation from the city authorities.

Statement From the Fire Commissioner.

Commissioner Adamson of the Fire

Commissioner Adamson of the Fire Department when asked as to the progress being made by the Mayor's committee in reducing the multiplicity of inspections, said to a representative of the Record and Guide:

"I am sure that a way will be found to prevent the constant annoyance of property owners by repetition of inspections and possibly by the conflict of orders or the issuance of new orders due to a change of mind on the part of officials. Many conferences have been held in the last few months to consider this subject, and I consider that great progress has been made. I think the Fire Department was the first department to take up this matter, though not the first to say anything about it publicly. We happen

to be in a position where the complaints

to be in a position where the complaints of property owners first make themselves heard, and I think the Fire Department was the first to make a practical move to reduce the cause for complaint.

"The first step that was taken was the formation of a committee of technical experts, due to the efforts of Mr. F. J. T. Stewart, of the Board of Fire Underwriters, and President Robert D. Kohn of the New York Chapter of Architects. This committee was made up of representatives of a number of outside organizations and representatives of the City izations and representatives of the City Departments, and its object was to for-mulate and adopt standards which might be used by all of the city departments.

The Mayor's Committee.

mulate and adopt standards which might be used by all of the city departments.

The Mayor's Committee.

"The next step, I believe, was the appointment by the Mayor of a committee of city department heads, of which I was chairman, to consider the general subject of co-operation between departments with a view to reducing duplication of inspections and any conflict of orders, if such existed. This committee found that the first logical step was to adopt harmonious standards which would be used by every department, and thus avoid the possibility of a department changing its mind and ordering one thing today and another thing tomorrow, and also avoid the possibility of one department ordering something in conflict with the requirements of another department. It was therefore decided that we should first proceed to formulate a set of standards which would cover every condition in the building.

"As the work of the outside committee, to which I have referred, was already well advanced in doing this work, it was decided that the Mayor's committee co-operate with it, as this department and several others had been doing since last January, and endeavor to push its work to a conclusion as rapidly as possible. This is now being done, and I feel sure that the work of this committee, after it has been considered and adopted by the various departments, will go a long ways in reducing cause for complaint. Every department affected is represented on this committee—in most cases by technical men.

"There have also been a number of conferences called by Mr. Abram I. El-kus, of the State Factory Commission, and these have been extremely helpful. All of the departments interested were represented at Mr. Elkus' conferences, there was a full discussion of every phase of the matter, and an effort was made to arrive at a plan of co-operation whereby any duplication or conflict of departments would be prevented.

"I think that these discussions and interchanges of views did a great deal to clear the air and to impress upon all of the d

Practical Progress.

"I think the Fire Department has made practical progress in this matter. For example, we have arranged with the Labor Department that when it sends us complaints of violations which come under the jurisdiction of this depart-

ment, that it shall give the exact floor of the building where this violation exists and the name of the person responsible. Upon the receipt of this, instead of sending around an inspector, this department companying the by letter with the sending around an inspector, this department communicates by letter with the person responsible, calling his attention to the violation, requests him to remove it, and states that within ten days or two weeks an inspector will be sent around to see whether the violation has been corrected. By this plan we estimate that our inspections are reduced by the number of 5,000 every year, as that is about the number of complaints of this kind that we receive.

Sympathy for Property Owners.

"I sympathize fully with the feeling of the property owners in this matter. I have felt all along that jurisdiction over safety in buildings is distributed over too many departments. I believe there

many departments. I believe there many departments. I believe there should only be two departments dealing in this matter, namely, the Fire Department, which should have jurisdiction over every matter effecting fire prevention, no matter in what class of building, and, secondly, the Health Department, which should have jurisdiction over the entire subject of ventilation, sanitation and health regulations generated

sanitation and nearth ally in a building.
"I do not mean by this that I would take away from the Labor Department its just control. This control, however, its just control. This control, however, should be regulated by a legislative and ordinance-making body and not by an administrative body. In other words, the Industrial Board should be continued with power to make regulations for all factories and factory buildings, but those regulations should be enforced by the local authorities which I have named. The Fire Department should enforce the

the local authorities which I have named. The Fire Department should enforce the Industrial regulations in respect to fire prevention matters, and the Health Department in relation to health matters.

Housekeeping Inspections.

"It seems to me the thought of creating a fire prevention bureau separate from the uniformed force, with its great experience and the opportunity which it offers for co-operation, is absurd to the last degree. How the uniformed

force can co-operate with the Fire Prevention Bureau in real fire prevention is being demonstrated now in this department. The uniformed force is now makment. The unformed force is now making all of the 'housekeeping' inspections. There have been over 500,000 of these so far. One of the results is that for the last six weeks we have been having a reduction in fires of between 75 and

reduction in fires of between 75 and 80 per week.

"These laws should be enforced with sanity, intelligence and judgment. If the heads of departments show a disposition to treat the property owners in this spirit, one source of irritation will be removed. The lot of the real estate owner in New York is anything but a happy one just now, and this fact should at all times be borne in mind by officials who have the power to issue orders affecting property. It certainly is alcials who have the power to issue orders affecting property. It certainly is always borne in mind in this department, and I trust that no property owner will have substantial reasons for complaint of any lack of consideration or just treatment from the Fire Department."

ETHICAL CODE OF NATIONAL REALTY BOARDS

The Golden Rule in Business-Increasing Appreciation of High Ideals—Standards Adopted at Pittsburgh Convention

PPLICATION of the Golden Rule A to the real estate business was urged upon the members of the National Association of Real Estate Exchanges by the Committee on Code and Ethics at the Pittsburgh convention in a report which was adopted without dis-cussion or objection. The basis of the a report which was adopted without dis-cussion or objection. The basis of the report had been under consideration at previous conventions and its general purport was well understood. The chairman of the committee, Henry W. Armstrong of Pittsburgh, who present-ed the report, in some preliminary re-marks said the members of the com-mittee desired to express their appremittee desired to express their appreciation of the honor which the president had conferred upon them in this appointment, indicating as it has his belief that they each as individuals appreciate the beauty and utility of ethical standards of living and that without incongruity the same may be adopted and practiced by those engaged in the real estate business. Parts of the code fol-

Duties of the Broker and Client.

Duties of the Broker and Client.

Should the location of a property offered a broker to sell or rent be such that he cannot render prompt and efficient service, he should either immediately enlist the co-operation of a fellow broker more favorably situated to accomplish prompt results or recommend that the owner place the property in the hands of such broker.

The broker should, if possible, promptly and carefully inspect and appraise such properties as he accepts for rent or sale, that he may be prepared intelligently and truthfully to advise the owner regarding the actual value of each and as to the prospects for securing the price desired; also that by viewing its peculiar advantages, if any, he may be stimulated to accept the such as the property of th viewing its peculiar advantages, if he may be stimulated to earnest effort to accomplish a sale, as well as by rea-son of the familiarity with the property thus acquired, to avoid misrepresenta-

It is also a duty of the agent or broker to suggest to owners in an appro-priate manner, as circumstances appear to warrant, the making of such repairs or improvements to buildings or premises which after deliberate consideration he believes will make the property more attractive to prospective tenants or purchasers, and vield increased returns

attractive to prospective tenants or purchasers and yield increased returns, justifying the new expenditures.

The broker may not safely and usually cannot honorably speculate for his own account with the property of his client. As a general rule he would do best to make sales directly for the account of the owner, deducting only the

usual commission. However, in some localities, especially in the Far West, in the marketing of large tracts of land, it is customary for owners to make a net price to brokers, choosing that plan

net price to brokers, choosing that plan as being mutually advantageous.

It is doubtless a duty of the broker strongly to encourage his client to express in the deed the real consideration for which a sale is made, for the sake of the moral effect thereof upon all concerned, to aid in preventing fraudulent practices as well as for the sake of the great advantage which should accrue to property holders in general, by reason of the improved opportunities afforded assessors to arrive at a fair and equitassessors to arrive at a fair and equitable basis for taxation. In rare cases circumstances may appear to justify the entering of a merely nominal consideration, but the latter custom is never open to the charge of intended misrepresentation.

Duties of an Agent.

The duty of the agent, to those ers whose property he holds in charge for rental purposes, requires him to spare no effort to secure reliable tenants spare no effort to secure reliable tenants for vacant properties as promptly as possible, agree to or recommend to the owner the making of such repairs as would be equally fair to owner and tenant, and make contracts therefor, with at least as careful regard to economy as if the property were his own. He should make prompt collections and ever keep in mind that the exercise of patience and courtesy, while discussing with the tenants affairs relating to the property, will not only increase his own popularity, but will usually enhance the interests of the owner.

The agent should guard the reputa-

The agent should guard the reputation of both the client and his property by declining under any and all circumstances to rent the premises to persons desiring to occupy the same for immoral purposes and should any owner wish him to do otherwise, it is his duty to the owner, as well as to himself, to decline to accede to those wishes even at the risk of the property being withdrawn from his agency.

Should Give Good Advice or None.

When appealed to by a client for advice, the agent or broker should never turn the applicant away with ill-considered suggestions, merely to save himself time and trouble. He should either decline to advise or take time to familiarize himself with all the essential details of the case, so that he may intelligently guide the applicant to his advantage rather than to his detriment. He should especially avoid giving advice

upon legal points with which he is not thoroughly familiar by reason of prac-tical experience, but should instead ear-nestly recommend that his client promptly consult a lawyer regarding such matters.

Duties of Broker to Buyers.

An invitation to deal with him, extended by the broker to the public, through any sort of medium, should be a guarantee to anyone who responds thereto that he will be dealt with in an honorable, straightforward manner, and no duties or responsibilities which the broker has assumed toward the owner by reason of the acceptance of his property for sale, can justify the broker in erty for sale, can justify the broker in dealing with the former in any other manner, as "duties never conflict."

Duties of Brokers to Each Other.

Duties of Brokers to Each Other.

In his attitude toward his fellow brokers each broker should endeavor to the best of his ability to at all times follow the Golden Rule—"As ye would that men should do to you, do ye also to them likewise." By the use of this quick acting and infallibly accurate computing scale, the ethical quality of any contemplated action may be immediately determined, but should complete success in this endeavor not immediatesuccess in this endeavor not immediately crown his meritorious efforts, compliance with the following suggestions will in the meanwhile be helpful and good progress.

A broker worthy of respect and confidence will never indulge in unfair criticisms of or untruthful statements regarding his fellow broker, either for the purpose of securing a personal advantage, at the expense of his fellow broker's reputation, through resentment for tage, at the expense of his fellow broker's reputation, through resentment for past injuries, either real or fancied, or for any other reason. The man who maligns his brother brings the whole family, including himself, into disrepute.

Brokers should recommend and earnestly encourage the granting of exclusive contracts by owners to brokers who

sive contracts by owners to brokers who make a specialty of the vicinity in which the property offered is located, because of the obvious and decided advantages accruing therefrom to all concerned.

Should a broker desire to offer a property for which he knows a fellow broker holds the exclusive agency, either under a written contract or otherwise, he should solicit permission to do so from the latter only and not directly from the owner, and the exclusive agent should at 11 times he willing to accept a setisfac all times be willing to accept a satisfac-tory buyer or tenant from the former, provided he has not already in prospect a buyer or tenant, as well as to agree to an equitable division of the commission with the broker whose customer he accepts.

BREWERY COLONY IN KIPS BAY DISTRICT

Acquisition of Large Waterfront Plot by the Schaefer Brewing Company Adds Another Concern to the Old-Established Center

OR more than half a century there has been a brewery colony in the Kips Bay section of the city, east of Third avenue, between 40th and 60th streets. That it is still desirable for such purposes is evident, by the fact that the F. & M. Schaefer Brewing Company, one of the earliest of the brewer settlers in the district, intends to erect a large plant along the East River, from 51st to 52d streets, having sold its Park avenue property to St. Bartholomew's Church. There are within the radius of one mile probably more breweries than in any other section of the city. Farther north, large companies, streets. That it is still desirable for such

other section of the large companies, including those of George Ehret, Jacob Ruppert and George Ringler, own brewery plants, but their number and collective size is not as large as that of the large as that of the group in Kips Bay district.

The tendency of allied businesses to create centers of their own has been a noteworthy char-acteristic of New York's commercial development, and the brewing indus-try is no exception to this rule. The reasons for the selection of this particular section of the city are not difficult to determine. The entire mine. The entire river-front, or in the vicinity to the river-front, is most desirable for the

desirable for the brewing business, because the salt water is needed for the ice machines and for the condensers used in the manufacture of beer. Another advantage is the shorter haul for coal and other supplies from the barges. If the concerns were located some distance from the waterfront it would involve not only additional expense but also delay in delivery.

tional expense but also livery.

The Central Park Brewing Company occupies the major portion of the block bounded by the East River, Avenue A, 56th and 57th streets. Peter Doelger's buildings take up practically the entire block bounded by Avenue A, First avenue 55th and 56th streets. Peter Doelger died in December, 1912, the owner of nearly

Softh and 56th streets. Peter Doelger died in December, 1912, the owner of nearly three hundred parcels of well located real estate.

The Consumers' Brewing Company of New York is situated on the west side of Avenue A, from 55th to 54th streets; and further west on the same block most of the property is occupied by the Henry Elias Brewing Company, Nearer Third avenue are the plants of the Jetter Brewing Company, and of Joseph Doelger's Sons. The latter firm has been established in business on that block since 1846. Just east is the large establishment of Jacob Hoffmann.

Farther south, at Second avenue and 47th street, are the Henry Clausen Brew-

ing Company and the Phoenix Brewing holdings. In the next block is located the Opperman Brewing Company and just south the United States Brewing Comsouth the United States Brewing Company. With this number of similar manufacturing concerns grouped together, it was inevitable that kindred business would also become established in the immediate vicinity, such as the ice plants, malt and other supply companies.

malt and other supply companies.

Typical of all water-front sections, the Kips Bay district houses a number of factories, coal pockets, stone yards, etc., with no particular class of industry conspicuous, except the breweries. There are to be found also rows of tenements and

tions of the district religious and educational institutions are not lacking. One of the most imposing ecclesiastical edifices in this city, the Roman Catholic Church of St. John the Evangelist, occupies with its school, the entire block front on the west side of First avenue, from 55th to 56th street. Further west is the German Evangelist Church and in East 57th street, near First avenue, is a Jewish synagogue. Other religious institutions include the St. Boniface Roman Catholic Church, at the corner of Second avenue and 47th street, and the Beekman Hill Church, in East 50th street. In East 44th street, near Third avenue, and extions of the district religious and educa-

avenue, and extending through to 43d street, is the Roman Catholic Roman Catholic Church and school

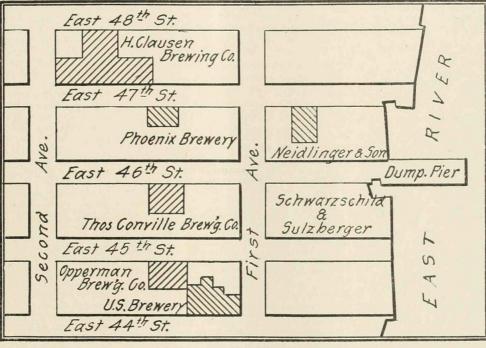

Church and school of St. Agnes.
Here, in 1663, lay the farm of Jacobus Kip, then secretary of the province, comprising about 150 acres of meadow, woodland and stream. Fourand stream. Four-teen years later Sir teen years later Sir Edmund Andros granted to David Duffor a tract of nearly 60 acres on the shore of the East River from 41st street to 48th 41st street to 48th street. On this farm, in addition to other buildings, was erected a grist mill, the first industrial development in what was destined to be a center of a brewing and other manufacturing district. St avenue, between s, stood the famous

ing and other manufacturing district.

Just west of First avenue, between 51st and 52nd streets, stood the famous mansion and country seat of William Beekman. In the green house of this dwelling Nathan Hale was confined, while the British officers deliberated on his fate. It served also during a period of the Revolutionary War as the headquarters of the English commanding generals, Howe and Clinton.

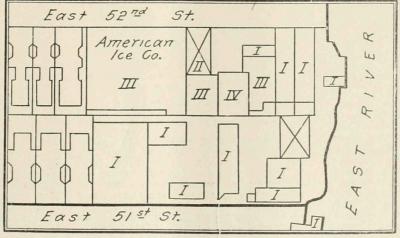

Hemmed in among the tenements, and in several instances outbuildings of the breweries, may be found some of the old Dutch Colonial residences, typical of the period. They may still be recognized in their strange surroundings by their solid masonry and quaint old fashioned construction. They are the last of the landmarks of Dutch occupancy of Kips Bay, long before the farm lands were invaded by the incoming tide of immigration. This brought with it industrial concerns and congested home communition. This brought with it industrial concerns and congested home communities. What stands out most conspicuously, however, in the Kips Bay district and makes it an interesting unit in the chain of New York industrial trade centers, is the brewery colony which is evidently there to stay, while other business centers shift constantly. The district is one, however, which will not be affected directly by the projected rapid transit lines.

rapid transit lines.

PROVISION FOR FUTURE RAPID TRANSIT

Advantages and Disadvantages of Subways, Elevated Structures and Open Cut Systems Discussed at National Conference on City Planning

By JOHN VIPOND DAVIES

T HE development of all big cities of the world has been dependent on The early cities were transportation. with hardly any exception built on waterways where the water furnished the waterways where the water turnished the means of transportation, and even in the development of New York City, the original city plan was laid out with the east-and-west streets running between the North (Hudson) River and the East River at frequent intervals, because the transportation was by those rivers, and the increased facilities for intercommunication from side to side were considered of superior importance to the longitudiof superior importance to the longitudinal movement which it was then believed would always remain upon the waters of the North River and the East

The steam railroad brings the city into touch with the outer world and yet at the same time it can, and must continue to, handle a very large share of what is usually described as rapid transit

Functions of Surface Systems.

Functions of Surface Systems.

The function of the street surface railroad is that of distribution within limited areas of the population, and as the population spreads and the distance and time for distribution become greater, it is obvious that a point is reached in the evolution of a city when some means of quicker and more rapid handling of passenger service becomes necessary.

Generally speaking, it can be assumed that a properly built railroad track, whether on surface right of way or viaduct or steel structure, or in a subway, is capable of doing only the same passenger business, or, in other words, can serve to operate the same number of persons per hour; and, further, that the operation and maintenance, including depreciation and all other charges, will, if a road is doing a reasonably full business, use up about 45 per cent. of its gross income, the remaining 55 per cent. being available to pay the interest charges on the capital invested. It, therefore, can readily be seen how important it is with light traffic to keep the cost of construction and equipment low, considering that, for illustration, the Interborough Rapid Transit Subway in New York, consisting in part of subway and in part of elevated structure, must haul more than 2,000,000 pay passengers per annum per mile of single track to meet fixed charges for structure and equipment; or, further, that a road which would cost, for structure alone without continuents. track to meet fixed charges for structure and equipment; or, further, that a road which would cost, for structure alone without equipment, say \$500,000 per mile of double track, would have to haul at a five-cent fare 910,000 pay passengers to pay interest charges on its expenditures for that structure and, if equipment were included, would have to haul probably 1,400,000 pay passengers per ment were included, would have to haul probably 1,400,000 pay passengers per

Statistics Given.

It will help materially in this consideration to have clearly stated the approximate relative costs of producing different structures, and the table published in the adjoining column presents in comprehensive detail what may be considered as the average cost for the general construction of structures and the installation of structural equipment but general construction of structures and the installation of structural equipment, but without power or rolling stock. The figures do not include the value of property for rights of way or easement and are given on the basis of constructing a double track railroad in each case, although reduced to the cost per mile of single track. single track.

In the matter of speed of operation of improvements under varying conditions,

it is well to bear in mind that for street surface railroads in congested portions of great cities the average speed does not exceed 8 miles per hour. In the less dense districts of a city this speed is increased to 11 or 12 miles per hour, but the average speed for street trolley railroads in cities will not exceed 9½ miles an hour. Similar electric trolley service in outlying districts on private service in outlying districts on private right of way will average somewhere between 12 and 15 miles per hour. Local between 12 and 15 miles per hour. Local service on elevated railroads or subways or in open cut, with stations approximately 1,200 feet apart, will operate at an average speed of about 15 miles per hour. Express service on subway or elevated railroads or in open cut, with express stops spaced about 2 miles apart, will operate at an average speed of about 25 miles per hour, while steam

402,000

railroads operating rapid transit suburban service, with stops at longer intervals, have an average operating speed of 30 to 35 miles an hour, depending on the district served and the frequency of stops. The spacing of stations on any type of rapid transit railroad is an important factor as affecting train operation and development of the district.

The increase in travel in relation to the population of cities, as illustrated by New York, indicates the growing necessity for constantly increasing facilities by all classes of transportation service. In New York City in 1860, by all means of public conveyance, there were only 43 rides a head of population

In 1870 this figure had per annum. per annum. In 1870 this figure had increased to 100; in 1880, to 150; in 1890, to 230; in 1900, to 247; in 1910, to 322; and the most recent figures indicate about 360 rides a head of population per annum during the last year.

The various types of structures which have been developed for rapid transit service comprise:

Types Enumerated.

Tube Tunnels.—In cities where the 1. Tube Tunnels.—In cities where the underlying soil is sand, clay, silt or other water-bearing material, below tidal or river levels, or under conditions where construction must be carried on without breaking the surface of streets, tubular tunnels, usually carrying a single track within each tube, are built by use of a shield and the lining constructed of cast iron or steel segmental plates. This type is used also for passing under rivers or waterways where no other type of structure is equally advantageous.

ing under rivers or waterways where no other type of structure is equally advantageous.

2. Subways.—By subway is meant construction in the open of a railway below surface grade and the structure covered over so as to restore intact a continuous street surface. According to the difficulties of construction, this type may be more or less expensive; but even in the cheapest form, with ideal conditions, the cost of producing such structures is so great as to warrant its being used only in districts where the population has reached a condition of practical saturation, or in commercial districts where the population has to enter and leave in large numbers.

3. Open cut.—The open cut method of construction of rapid transit facilities necessitates gravity retaining walls and construction at a depth which will permit highways to be abridged over such open cut. This method has an advantage over a subway in the matter of first cost due to the fact that usually steam shovels may be used.

4. Viaducts.—The development of viaducts with masonry and solid fills was the earliest type of construction of steam railroads through European cities. As applied to a street, it is very questionable whether it is a desirable type,

As applied to a street, it is very questionable whether it is a desirable type, as the masonry and piers have of necessity to be massive and obstructive.

Above Ground Systems.

Above Ground Systems.

5. Elevated Railroads.—The elevated railroad, constructed of steel, serves a function which it would be difficult to replace. The first cost of such a structure is reasonable and its application to surface conditions is remarkably easy. A solid track floor of reinforced concrete increases somewhat the cost, but reduces the noise, and probably reduces somewhat the cost of maintenance. To the traveler this mode of transportation is particularly desirable since he gets the full benefit of light and air while traveling. The great function served by the elevated structure is to enable a railroad long. The great function served by the elevated structure is to enable a railroad to be constructed which does not interfere with the use of the street surface and provides rapid transit operation at the smallest cost.

The introduction in the last 15 years of electric power for propulsion has advanced greatly, the rapidity of such described to the control of the

of electric power for propulsion has advanced greatly the rapidity of such developments. New York started in 1875, when its population, now included within the territory of the Greater City, was 1,700,000, to build elevated railroads, operated with steam locomotives, by private capital, and for years they were a financial failure. Brooklyn followed suit at a later date, about 1885, and managed to survive for several lean years until the territory served grew.

HOW LAND IS DEVELOPED

William E. Harmon Gives Some Inside Information-Regarding Mortgages and Release Payments - Street Improvements.

William E. Harmon gave the real estate convention at Pittsburgh some advice regarding suburban land development. He said, first, that he rarely paid over forty per cent. cash for his raw acreage. Press reports quote him as

follows:

"We rarely, if ever, pay over 40 per cent. cash," added Mr. Harmon. "We like to buy our properties from 30 to 33 per cent. cash—balance secured by a purchase money mortgage running five or six years—preferably six, with interest at a rate not exceeding 5 per cent. The mortgage should contain a release clause providing for a distribution by the mortgage of the amount of the mortgage with not more than 20 per cent. additional over the plat, fixing prices on each lot in accordance therewith, which price shall constitute the price at which said lot is released, together with rights-of-way over all streets and alleys.

"Sometimes an owner will demand his release payments in sums of from \$1,000

price at which said lot is released, together with rights-of-way over all streets and alleys.

"Sometimes an owner will demand his release payments in sums of from \$1,000 to \$5,000 at a time, but if so we always require that if we are obliged to pay larger sums than our immediate release requirements, and are not prepared to ask for releases up to the amount of our payment, that we can call for releases subsequently until they aggregate the amount of money we have paid. I suppose more investments have been wiped out through inadequate or improper release clauses than would be represented by all the capital stock and deposits of all the banks of Pittsburgh, and it is so easy to do the thing properly in the first place that there is no excuse for neglect of this most essential matter.

"In addition to the amount of cash necessary to purchase the property, a developer should have available an amount approximately equal to this amount for the purpose of preliminary expenses such as improvements, advertising, construction of houses, etc. If a sale goes right this may be more money than you need, but if it should go wrong, you will need every cent of it. To illustrate: Assuming a piece of property cost \$100,000 and a first payment was \$40,000, we would in this instance set aside \$30,000 for our preliminary work; if we paid \$30,000 cash, we would set aside from \$30,000 to \$33,000 for preliminary work, for in the latter case the release requirements would be heavier than in the other case cited."

Street Improvements.

"With regard to street improvements,"

Street Improvements.

"With regard to street improvements, my point of view is to make them as good as possible; that is to say, as good as your clientele will stand. In Chicago it costs us from \$250 to \$300 to put cago it costs us from \$250 to \$300 to put the improvements in on every thirty feet of ground, but in Chicago it pays to do this. On the other hand, in an industrial city like Pittsburgh people would not pay for such costly improvements on the class of property we handle, and one-half the above amount is probably about as much as is practical to spend. The point to be kept in mind is to give the people all that they will pay for; in this way you are creating something of a permanent character, and the benefit comes to you as well as something of a permanent character, and the benefit comes to you as well as to your customer. Besides sewers, gas, water, electric lights, curbs, macadam or asphalting and sidewalks and parking places, floral and shrubbery embellishments, which represents what might be termed perfect improvements, we have added what we have termed a maintenance fund amounting to \$1 to \$1.50 per front foot, which is paid in by the pur-

chaser during the term of his installments, and which is used for keeping the property in an attractive, park-like condition, removing snow, etc.

"In the Russell Sage Foundation Homes Company, with which I have been connected in an advisory capacity since its beginning we have a permanature of the property of the same of the sa since its beginning, we have a permanent maintenance fund in which we fol-

nent maintenance fund in which we followed the suggestions of Edward Broughton, who made such a successful development in Baltimore of the property called Roland Park.

"Now, I could spend a good deal of time going into the cost of street improvements, but I don't think that is necessary here. Moving dirt costs from seventeen to twenty-five cents per yard, and moving excavation and stone \$12.50 a yard, and granolithic curb and gutter cost from fifty to sixty cents a foot, and sidewalks from eight to fifteen cents a square foot; macadam, \$1.25 a square yard, and asphalt, \$2.50. These figures are not strictly accurate and vary in different places.

"It might be said of the form of main-

"It might be said of the form of main-tenance fund established in the Sage Foundation operation that in its essence foundation operation that in its essence it becomes a permanent charge against the property, and is somewhat hard to establish, because it is in perpetuity, but when it can be put through the permanent effect upon the property is undoubtedly worth the individual contribution of the lot owner, and in the long run the property would show the effect in its enhancement in value."

—Mount Morris Park was bought for \$26,000 and is now worth \$7,500,000.

—New York City is the owner of 5,500 parcels of real estate, valued by the assessors at \$1,300,000,000.

OUEENSBORO BRIDGE CHANGES

New Plans for Rapid Transit Tracks and Carriage Drives.

New Plans for Rapid Transit Tracks and Carriage Drives.

The plans of the Bridge Department for the reconstruction of the Queensboro Bridge, to adapt it to the operation of the rapid transit trains of the Dual Subway System, are favored by the members of the Chamber of Commerce of the Borough of Queens. A delegation headed by Robert W. Higbie, president, and John Adikes, chairman of the Transit Committee of the Chamber, called upon Bridge Commissioner Kracke this week and made a thorough study of the new plans that have been devised to carry both the Brooklyn Rapid Transit Subway trains and Interborough Elevated trains across the bridge, without reducing the total roadway capacity. The plan provides for two rapid transit tracks on the north side of the lower level, and two rapid transit tracks on the south side of the upper level; and two 26 ft. roadways for vehicles, one on the north side of the lower level.

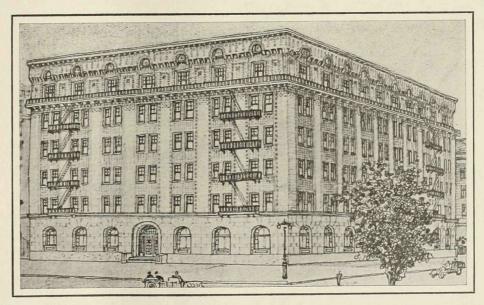

After inspecting the plans those present at the conference express themselves as greatly pleased with the efficient solution, which is the result of the efforts of Bridge Commissioner F. J. H. Kracke, Chief Engineer A. L. Bowman and Traffic Engineer C. M. Ingersoll.

The Queens Chamber of Commerce

man and Traffic Engineer C. M. Ingersoll.

The Queens Chamber of Commerce took the position months ago that there should be no delay in the early reconstruction of the bridge in order that rapid transit might be inaugurated as soon as possible on those extensions into Queens, which connect with the station on the Bridge Plaza, Long Island City, and at the same time urged the Bridge Department and the Public Service Commission to take into consideration the serious matter of the proposed reduction in width of the present roadway by the operation of the Brooklyn Rapid Transit trains. It was also urged that additional roadway space be provided, if possible, on some other part of the bridge to compensate for any reduction of the present roadway on the lower level. The plans as proposed, will not only insure the early inauguration of rapid transit across Queensboro Bridge, but will give a total width of 52 feet for vehicles.

NEW WASHINGTON HEIGHTS APARTMENTS

George & Edward Blum, Architects.

162D STREET AND FT WASHINGTON AVENUE.

NEW high-class elevator apartment A NEW high-class elevator apartment is nearing completion at the southwest corner of Fort Washington avenue and 162d street by the Friedman Construction Company, owners and builders. The plans were prepared by George and Edward Blum, architects, 505 Fifth avenue. The building is six stories in height and covers a plot $140 \times 161 \times 102 \times 100$. The facades are of Indiana limestone and tapestry brick, with a decorative treatment of terra cotta. Balconies and fire escapes are of ornamental iron and tile. Forty-two families will be housed in this building in suites ranging from four to eight rooms each with one or two baths. The building, which represents an expenditure of over \$200,000, will be ready for occupancy early in September, 1914.

Too many To Let signs in a neighborhood do it no good in public estimation, and real estate boards are advising moderation. A multiplicity of signs ing moderation. A multiplicity of signs exaggerate conditions which may be far from being as bad as they seem.

There is plenty of gold for export to Europe, the U. S. Treasury officers say, and it will come back, with more besides, in payment for American manufactures and food supplies that will be needed in case of a general war.

August Belmont has had added to the list of his great public services the completion of the Cape Cod Canal, celebrated this week. May a good net income from tolls reward his public-spirited investment.

One of the sad things connected with One of the sad things connected with city life is the absence of playgrounds for boys and girls. It constitutes one of the main reasons why families move to neighboring villages. One of the best things the Real Estate Board can do is to lead the movement to prevail on the owners of vacant lots to let the children have them for playgrounds.

In compliance with the request of property owners along William street, Manhattan, and with an opinion of the Appellate Division, the Public Service Commission has agreed to draw up the liability clause in this contract in a different manner than usual. Heretofore the contractor for any section of work assumes all liability resulting from such work. The work in William street, however, will be through very low and partly made ground, and for that reason the property owners wish the city to be primarily responsible for any damage that may result to their buildings. The contract will accordingly be drawn in such a manner that the contractor will still be responsible, but he will have the backing of the city.

The Lower West Side.

Mr. Cyrus C. Miller is right in comparing the West Side of Manhattan from Chambers street to 23rd street to a withered limb. A limb which has been allowed to become withered, be-cause it has been deprived of the blood necessary to its vigorous development. As a consequence of the natural advantages of its situation the Lower West Side of Manhattan should have been the particularly industrial part of the city and should by this time have been covered with warehouses, factories and business offices. It is the part of Manhattan which is most accessible to companying the part of the country of the c munication with the rest of the country and with the world, but it has never been allowed to profit by its natural advantages because in every respect it has been denied any sufficient machinery with which to turn its advantages to good account good account.

with which to turn its advantages to good account.

In the first place, its street system was laid out apparently for the purpose of isolating it. It was provided with no thoroughfare connecting it with the Upper West Side and with the central business ridge of the island. It did not even have the benefit of a straight avenue connecting Greenwich Village with upper Broadway. It has been equally ill-provided with means of transit. The surface cars which ran through that part of the city provide a most inferior means of communication with the other parts. Some districts did indeed profit from the Ninth and Sixth avenue elevated roads, but not for long. When the first subway was built the West Side was left entirely out of account, and the consequence was the cream of the wholesale trade was diverted to the line of Fourth avenue on the Elst Side.

and the consequence was the cream of the wholesale trade was diverted to the line of Fourth avenue on the East Side. Finally, what was worst of all, no attempt has been made to improve the means of handling the freight which needed to be shipped into the West Side and shipped out of it.

In this respect nothing has been done during the last forty-five years except to build improved docks. The freight has to be hauled in and out the city in trucks and barges. The New York Central has tracks running down the West Side; but they are all of comparatively small use compared to the advantage which would be derived from a modern freight railway, which was properly connected with warehouses and docks. The largest city in the United States has treated this phase of its business machinery in the spirit and with the neglect comparable to that of with the neglect comparable to that of a backward Southern village, and it is no wonder that the community is not now deriving anything like the economic benefit from the West Side of Manhattan which it cannot be derived. nomic benefit from the West Side of Manhattan which it ought to derive. A better illustration could not be asked of the close relation which exists between private parties in business and a responsible public policy of business encouragement. If New York showed anything like the business public spirit that the German cities have developed, the lower West Side of Manhattan would now be crowded with factories and warehouses, and its working population would be living remote from their work in New Jersey or the Bronx.

A Revival on the Way.

A Revival on the Way.

The revival in business which was predicted in the Record and Guide some weeks ago seems to be slowly but surely putting in its appearance. There are evidences of an increased volume of business in many different parts of the country, and this increasing activity has been taking place without the assistance of any of those stimulating causes upon which business men have apparently been counting. Congress has not adjourned, and has gone ahead with the legislation in relation to trusts, which were supposed to be so dangerous to business prosperity. The decision of the Interstate Commerce Commission in regard to the increase of freight rates has not at this writing been formally announced, but its general nature has been an open secret, and it is known that the railroads will get only a part of what they have demanded.

The effects of this decision are already fully discounted, and it will not result in the paralysis of business in which it was expected to result. The more cheerful feeling is due in part to the prospect of unprecedently large more cheerful feeling is due in part to the prospect of unprecedently large crops, which are likely to be sold at high prices, and impart to a general revival of confidence. Business men are recovering from their scare and are more ready than they were to invest capital in new enterprises or in adding to existing plants. Of course the recovery is only just beginning and it is being expressed more in a change of disposition and spirit than in the announcement of matured plans; but unless the increase in confidence receives a setback it will undoubtedly bear substantial fruit during the coming fall and winter. What the consequences of the wars breaking out or impending in Europe at this writing may be to the business of this country cannot now be foretold. foretold.

foretold.

At this moment Europe is on the brink of a war involving the great powers. Whether the crisis will eventuate in anything more than a localized attempt on the part of Austria to punish Servia while the other powers keep off, or whether all the powers will be brought into the conflict by their alliances and ententes, is a question yet unanswered. As the answer may come before these lines reach the reader, this is not a time for prophecy. But it can be said that the American government is fortunate in having no entangling alliances and also fortunate to be in a sound financial condition.

A Confusion of Laws.

The fire-hazard in some factories has been made the reason for much legislation in the last few years. Private societies and governmental commissions have been chartered to formulate and promote restrictive laws and regulations. Men and women of more or less wealth and leisure, with a desire to be of service to their fellow men, have found opportunities. Others have found remunerative positions as investigators, inspectors and technical experts. The legislation has emanated both from the city and the State, and new powers have been conferred and new authorities ordained in order to enforce it. A large mass of labor legislation has come from the labors and reports of the State Factory Investigating Commission which was appointed in 1911 to investigate conditions of manufacturing in loft buildings in fort and search descriptions. The fire-hazard in some factories has was appointed in 1911 to investigate conditions of manufacturing in loft buildings in first and second class cites, and which has since had its powers enlarged and its tenure prolonged. The body of laws enacted this year under the designation of New York State Labor Laws fills more than sixty pages of fine type in a special bulletin issued under the direction of the Commissioner of Labor. A mere index of brief titles of labor bills introduced fills fourteen other pages. There seems to be a new fancy for welfare work that finds expression in legislative bills to regulate the construction, maintenance and taxation of buildings. No doubt it is only a passing emoings. No doubt it is only a passing emo-tion, but the temporary consequences have been serious to real estate interests, besides confusion and conflict in administrative circles.

besides confusion and conflict in administrative circles.

Laws passed in 1913 were repealed this year, and now the whole code of labor laws is being revised. According to a former statue, one of the two required means of exit from a factory building might be an outside fire-escape if, in the opinion of the Industrial Board, safety was not thereby endangered. An amendment made this year, however, provides in effect that whereas formerly the permission of the Industrial Board was to be obtained before an outside fire-escape could be used, such fire-escapes may hereafter be used until the board affirmatively "finds" them unsafe. (The use of outside fire-escapes in buildings over five stories high remains contingent upon the approval of the board.) At first it was required that stairways in factory buildings more than four stories high should be enclosed with fire-resisting material, but the law did not define the material. The latest amendment applies

this requirement only to buildings more this requirement only to buildings more than five-stories high, but the regulations for fire-resisting materials have not yet been promulgated. A third modification made by the Legislature this year is that windows leading to fire-escapes may be provided with frames and sash covered with metal instead of being made of metal and the definition of fire-proof of metal, and the definition of fireproof windows has been changed so as to permit windows has been changed so as to permit frames and sash covered with metal instead of being made of metal. The duty of providing proper ventilation and also dressing and emergency rooms for women has been laid upon the person operating the factory and lifted from the owner. While these amendments have been favorable to the landlords, still remaining

vorable to the landlords, still remaining are many requirements which if not unare many requirements which it not unjust are crude and absurd. It is highly desirable that they be revised, a relief which the Governor has promised and the Factory Commission has undertaken. But more than this is justly due. An opportunity is presented of once for all, settling the conflict between city and State authority, and of reducing the fundamentals of the law to the simplest possible terms. A State Labor Law should not be loaded with a helter skelter colnot be loaded with a helter skelter col-lection of construction details. Leave the details for departmental rules and regulations; and where cities are already equipped with a full quota of inspection bureaus, leave the enforcement of the law and regulations to the local authorlaw and regulations to the local authorities, whose work in turn should be reduced, co-ordinated and synchronized, much after the manner that Superintendent Miller has already suggested to the State authorities. If these reforms should follow the present confusion, real estate would be measurably compensated for a long series of unjust impositions. for a long series of unjust impositions

The Single Tax in Other Lands. Editor of the RECORD AND GUIDE:

There was introduced in the Legis-lature at the last session an act, "to amend the Greater New York lature at the last session an act, "to amend the Greater New York charter, by providing for a difference in the rate of taxation on the value of land wholly unimproved, and the rate on the difference between the value of the land with its improvements and the value of the land wholly unimproved."

This act provides only for a shifting of the rate from the improved property by that of the unimproved property by

of the rate from the improved property to that of the unimproved property by easy stages covering a period of five years, so that at the end of five years, unimproved property will bear 50 per cent. of a higher rate than real estate wholly improved. The change is to be gradual so as to almost be imperceptible, and in that way the change can be brought about without any sudden revolution or shock. The owners of real lution or shock. The owners of real estate and the institutions lending money on bond and mortgage can gradually adjust themselves to new conditions. It must be borne in mind that it was not proposed in this act to change the values of the unimproved and improved property for the purposes of taxation; it was only the rate that is to be adjusted justed.

In other countries the taxes imposed In other countries the taxes imposed on the owners of real estate property is more onerous than here. Lloyd-George's budget of 1909 imposed four different taxes upon land, the first and most important of which was the so-called increment value duty. This imposed a tax of 20 per cent. upon the land increment arising after 1909, payable by the owner when land is sold, leased for more than fourteen years, or transferred at death.

at death.

In Germany the first of the recent experiments in taxing the increment of land was made in the model German colony of Kiao-Chau, established in China in 1897. The land and tax ordinance of 1898 imposed a tax of 331/6 per cent. of any increment of value accruing thereafter to private authorization of lands. cent. of any increment of value accruing thereafter to private purchasers of lands acquired from the government, a tax of 6 per cent. on the value of land, exclusive of improvements, and a tax on land sales at auction. In 1904-5 Frankfort and Cologne took the lead in this reform. By 1910 the increment tax was in operation in 457 cities and towns in Germany, yielding a substantial revenue, the rates of taxation being as high as 25 per cent.

In 1911 the German Empire introduced an imperial tax upon the unearned incre-ment. This law imposes a progressive tax, increasing according to the percentage which the increment bears to the original value of the land. The rate is 10 per cent. of the increment when that amounts to 10 per cent. of the original amounts to 10 per cent. of the original value, and increases one per cent. for each additional 20 per cent. of increment until it reaches 19 per cent. on increments ranging from 170 per cent. to 190 per cent. From that point it increases one per cent. for every additional 10 per cent. of increment, until it reaches 30 per cent. on all increments of 290 per cent. and over, with provision for certain deductions. The imperial tax is intended to unify the taxation of the unearned increment throughout the empire and will replace the local increment taxes. To compensate the cities for the revenue thus lost, the law provides that 40 per cent. of the product of the imperial increment tax shall be apportioned to the local governments, while the 40 per cent. of the product of the imperial increment tax shall be apportioned to the local governments, while the States are given 10 per cent. and the empire retains 50 per cent. Authority is granted, however, to impose additional rates for local purposes, so that some measure of local option is retained.

In Australia, Queensland has already adopted the exemption of all improvements, and New South Wales, South Australia and every other State, as well as the federal government, are moving steadily in the same direction.

New Zealand has had a graduated state land tax since 1891, which has already to a great extent accomplished its purpose of breaking up large estates. In 1896 local bodies were empowered to levy their rates on the unimproved value of land. By 1909 not less than 85 districts had adopted the method with satisfactory results.

satisfactory results.

Of the nine Canadian provinces, three Of the nine Canadian provinces, three have taken important steps toward the single tax. In British Columbia, provincial revenue is still derived from poll, property, and income taxes, but since 1891 municipalities have been permitted to exempt improvements from taxation in part or in whole. Since 1892, indeed, municipalities have not been permitted to assess improvements at more than 50 to assess improvements at more than 50 per cent. of their actual value. Under the authority thus granted all the important urban and many rural municipalities tant urban and many rural municipalities are now exempt entirely, thus raising practically all local revenue from land. The Government, through its Finance Minister, Hon. Price Ellison, now formally announces its purpose to adopt the single tax for all provincial revenues. He says, "Our aim is to reach a point where direct taxation will be eliminated and our revenues will be obtained from the natural resources of the province. This I regard as a sound policy."

In Ontario, 300 municipalities have petitioned for power to reduce taxes on

titioned for power to reduce taxes on improvements. By twenty-three to one, the Toronto City Council, in January, 1913, submitted to the citizens the question of exempting buildings, whereupon the citizens voted in the affirmative, four

Land owners are adopting a false poltand owners are adopting a laste project in proclaiming that their property is being reduced in value and confiscated and that it will bring a revolution in real estate through destroying mortgage values. By adopting this false cry they are depreciating the value of their own are depreciating the value of their own property and destroying the real estate market. So it is they and not the advocates of the milder form in taxation as represented in the Herrick-Schaap bill that will be responsible for depreciation in values. Their policy should be to meet the advocates in this reform half way and to agree on a policy of reform in taxation that will benefit the community as a whole.

B. C. BROWNFILLE

B. C. BROWNFILLE.

Growing Cost of Government.

The cost of municipal government has grown rapidly since the simple methods of the fathers have been made to give way to the so-called modern systems. The comparatively few regulations which the old charter builders thought sufficient have been expanded into elaborate codes, small committees have grown into big departments, and petty

offices into high-salaried commissioner-

offices into high-salaried commissionerships. In most cities the increase in taxation has been out of all proportion to growth of population.

A report just made public by the United States Census Bureau deals with the per capita expenditures of municipalities for other than public service enterprises, and it covers the operations of 195 cities having a population of 30,000 and over in the year 1912. The total per capita payments of these cities for expenses of the kind indicated averaged \$17.34 in that year, an amount representing an advance of \$4.22, or 33.2 per cent, as compared with the year 1902; that is, just a decade before, when the expenditure per head of population was \$13.02.

The per capita payment for fire department service for the 195 cities increased from \$1.30 in 1902 to \$1.62 in 1912. The per capita cost of police protection increased from \$1.84 in 1902 to \$2.04 in 1912. The expense for education shows the largest advance for the decade, rising from \$3.61 in 1902 to \$5.02 in 1912.

Strength of American Finances.

It would be idle to attempt an estimate of how far foreign liquidation of American stocks might go in the event of a great European conflict, says the Wall Street Journal. The amount of foreign investment in American securities is enormous, and if investors were obliged to liquidate on a large scale, the consequences would be difficult to foretell. American securities can now be consequences would be difficult to fore-tell. American securities can now be liquidated more readily than those of other countries and that is one of the chief reasons for the recent heavy selling here. The situation, so far as our stocks are concerned, will end, however, like a run on a bank which promptly meets all demands and demonstrates its strength and solvency. In that case there is a rush of depositors to put back their money; and when New York has successfully withstood the present wave of selling, there will be a return rush of foreign buyers for the securities of the country in which liquidation can be accomplished under any circumstances.

Ticket Booths and Choppers.

Ticket Booths and Choppers.

The method of control for all principal stations on the new subway lines to be operated by the New York Municipal Railway Corporation will be by ticket booths and choppers instead of turnstiles, but at stations where traffic is light, turnstiles may be established and continued until the commission decides that conditions require the substitution of ticket booths and choppers. This means that ticket booths and choppers will be used at all stations on the new lines in Manhattan, except the stations in the Centre Street Loop and on the Nassau street extension of such loop. The question as to this extension is left open until the plans shall have been completed. Ticket booths and choppers will be used at all stations on the new lines in Queens Borough; on the Montague street-Flatbush avenue connection in Brooklyn; on the main line of the Fourth avenue subway in Brooklyn, including the extension to 86th street; at all stations on the New Utrecht avenue and Culver line elevated roads in Brooklyn north of and including 62nd street and Avenue I; also at the 18th avenue and Coney Island stations on the New Utrecht avenue line, and at the Coney Island station so that ticket booths and choppers may be installed when the commission desires without inconvenience or much expense, but that in the meantime turnstiles may be used if the company so desires. The use of turnstiles will be permitted on all lines built and owned by the operating company, subject to the right of the commission to order a change when conditions demand it. The commission also, directed its chief engineer to provide for the immediate construction of stairways at both ends of the stations on the New Utrecht avenue line.

LIVERPOOL INTERESTED.

In Mr. Lustgarten's Story About New York Real Estate.

York Real Estate.

The Liverpool (Eng.) Daily Post and Mercury contains an interview with Mr. William Lustgarten, of the real estate firm of Wm. Lustgarten & Co., of New York, and secretary of the Tax Law Revision Committee. The report says:

"Mr. Lustgarten, who is over for a holiday in company with several friends, told how the old tenement houses of New York are being remodelled and modernized as a result of the partial adoption of the principle of the taxation of land value. In New York the system proposed in Mr. Lloyd George's present Budget, of separating land and buildings for the purpose of assessing and rating Budget, of separating land and buildings for the purpose of assessing and rating both occupied and vacant land at its fair value, has been in operation since 1903, and the economic consequences have been important and far-reaching. The effect of the rate on unused building lots has been to make it imperative for the holders to bring them into use. The building of new houses has been greatly stimulated, and to these new tenements have been attracted large numbers of tenants of the old consumption-breeding tenants of the old consumption-breeding rookeries.

Renovation of Old Houses.

Renovation of Old Houses.

"Firms like that of Mr. Lustgarten then step in, buy the old property at the price of the land, entirely renew the interiors and the roofs, equip the houses in the most modern up-to-date style, including improved sanitary arrangements, the conversion of cellar kitchens into storerooms, and the provision of white enamel sinks, stationary slate washtubs, etc. This is precisely the kind of scheme suggested recently by our own Special Committee on Leaseholds in regard to the old Corporation property in the Abercromby

gested recently by our own Special Committee on Leaseholds in regard to the old Corporation property in the Abercromby district, and the advocates of that plan will be encouraged by the success of the venture in New York. 'Not only,' said Mr. Lustgarten, 'are the renovated tenements quickly let, but there is always a waiting list of tenants ready for them, and it is certain that the health of the city will be greatly improved.'

"Mr. Lustgarten expressed himself as perfectly satisfied that the taxation of land values in New York has been of enormous public benefit, and he is a strong advocate of raising the tax to 100 cents on the dollar, while realizing that the profits of land speculators, like himself, would then disappear. An annual tax of 1.85 per cent. on the selling or capital value, equal to 37½ on the annual value, makes it impossible, he said, to hold land out of use. Many wealthy families have had to partition their large estates on Manhattan Island because to hold them out of use was too expensive a luxury. hold them out of use was too expensive

a luxury.
"As an instance he mentioned a corner "As an instance he mentioned a corner site on 11th avenue, owned by the Astor estate. It had never been built upon since the Creation, but its selling value was assessed for the purpose of taxation at \$37,500, though measuring only 75 feet by 125 feet. At public auction Mr. Lustgarten bought the plot for \$46,000, and in thirty days he sold it again at a profit of \$5,000, and it is now occupied by a big warehouse.

To Abolish Slums.

"During his visit to this country Mr. Lustgarten has seen a good deal of London, Edinburgh, Glasgow and Liverpool, and noted the congestion to be found at the heart of each city, while within a tenminutes' ride by train there are thousands of acres of open country. Many of the old houses, he said, ought to have been scrapped generations ago. 'In Edin-

burgh I saw tenement buildings five stories high, which are said to be 600 years old. Why, in New York we have a sinking fund for every building, and every thirty years practically everything is scrapped and rebuilt out of the amortisement fund. If you had a tax on the land values you would have to do the tisement fund. If you had a tax on the land values you would have to do the same, and slum property would be demolished and rebuilt without any cost to the city. The quickest, cheapest and most equitable way of clearing your slums is just to put a tax on your land values.'

"Mr. Lustgarten added that he looks forward to a big building boom in New York next year. By then the effects of the slump of 1907 would have passed away, and the opening of the Panama Canal would cheapen shipments to the West and reduce the railway freight rates."

How He Grew Rich.

The late Charles Edgar Appleby, who accumulated a fortune estimated to exceed \$25,000,000 in real estate, once gave expression to these views:

"If I had spent ten per cent. a year more between the ages of twenty-one and thirty-one I would not have been worth ten per cent. of what I have. That ten per cent. made me forehanded.

worth ten per cent. of what I have. That ten per cent. made me forehanded.

"I have always advised young men that the way to become wealthy is to save. Saving and careful investment will make any man well off.

"Real estate stays in a family longer than money. For that reason I believe in investing in land.

"It has been my rule to keep the value of my property in land, not in building. Land can't wear out, can't deteriorate, doesn't demand insurance and doesn't need repairs. The value of land constantly advances. That of buildings constantly deteriorates. I never mortage my property. I prefer to lease my land to others to build upon, or to lease it for purposes not requiring big buildings. That is what I call scientific investment." ings. Th

Objecting to a Tenement Law.

Objecting to a Tenement Law.

Brooklyn real estate interests are complaining considerably on account of the Tenement House law prohibiting the erection of a tenement or apartment house containing a room which has less than 70 square feet of floor space or less than 7 feet wide. Under this law it is unlawful to construct a room 6 feet 10 inches by 11 feet, but it is lawful to construct a room 7 by 10 feet, which is considerably smaller. The former room would contain 74 and a fraction feet while the latter would contain but 70 square feet.

To the inexperienced person this might seem like a harmless little feature of our modern method of enacting laws without due consideration to the un-

of our modern method of enacting laws without due consideration to the unlooked-for effect they might have, but it is a very serious matter, especially in Brooklyn, says the Brooklyn Times. Brooklyn feels the burden of this law more than its sister boroughs, because of the fact that here the normal width of lots is only 20 feet. There are thousands of these lots in Brooklyn for which three-family houses would be a most logical improvement, but they are practically unusable and unsalable because of the expense and difficulty of complying with this joker law.

The present law forces the construction of large tenements. To some persons this might seem to have been an

sons this might seem to have been an object in passing the law, but it creates congested conditions, and from the standpoint of good government and good morals, the fewer families under one roof the better.

One prominent real estate man, in commenting on this law said: "The destruction of property values cannot be continued much longer with impunity. The city will soon find that notwithstanding its new subways, its borrowing capacity will disappear and many public improvements will be delayed for years.

Proposed New Highway.

Proposed New Highway.

Because of the large amount of vehicular traffic over the Long Beach road a movement is on foot to have the thoroughfare widened to 100 feet and rebuilt. There is also a sentiment for an entirely new highway from a point between Freeport and Rockville Centre southwest to Long Beach. The present Long Beach road is fifty feet in width and extends from the Merrick road at Rockville Centre south through Oceanside to the Beach. As many as 1,500 automobiles an hour pass over it during certain hours on Sundays.

automobiles an hour pass over it during certain hours on Sundays.

One-half million dollars is the estimated cost of building a new highway, while the cost of rebuilding and widening Long Beach road would be considerably less. A new highway to Long Beach would pass through Oceanside the same as Long Beach road does and that section is now undergoing extensive development and improvement. The Long Island Railroad has built a new station at Oceanside.

Long Island Railroad has built a new station at Oceanside.

Nassau County, however, does not want to pay all of the cost of these proposed highway improvements because automobilists from everywhere in and adjacent to New York City travel to the ocean front of the county. It will urge the state to make the improvement.

New School at Douglaston.

Douglaston is to have a new modern school house to be built on the site of the present one, which is not large enough to accommodate the increasing number of pupils in the fast growing section. The plans, specifications and appropriation have already passed the New York City Board of Education and the Board of Estimate. In October the bids for construction will be accepted and the work of demolishing the old building and erecting the new one will begin. Owing to the style of architecture in Douglaston Park, which adjoins Alley Park and the school house tract, the plans have been drawn with special care as to design and modern conveniences. The specifications call for a modern brick building and the appropriation and estimated cost is \$129,000.

Douglaston Park and contiguous communities have developed so rapidly during the last few years that it has become imperative for the city officials to meet the need of larger and better educational facilities. The entire market of North Shore real estate has shown encouraging results in spite of the so-called business oppression.

The Committee Controls the Board.
The Board of Estimate as now organized gives the City Plan Committee a majority vote in the Board. This may have some advantages, though they are have some advantages, though they are not apparent. Questions of the greatest importance, calling for the expenditure of large sums, will be submitted to this committee. A unanimous report means the committee can always carry its plans through the Board of Estimate. In this connection the Bulletin of the Real Estate Board says:

tate Board says:

"It seems to be a grave mistake that any sub-commmittee of the Board of Estimate should control a majority vote in the Board."

Steinway Tunnel Progress.

The Steinway tunnel will be completed by the first of the year, and ready for a shuttle service from Long Island City to 42d street and Lexington avenue, Manhattan, according to Engineer Shailer, who has charge of the real results. ler, who has charge of the work now being done in the tubes. With the exception of the laying of the tracks, the work of that part of the tubes under the river is about finished and the men are now working on the land ends of the tunnel, both in Long Island City and Manhattan.

LOCAL IMPROVEMENTS.

Van Courtlandt.

Van Courtlandt.

1247. Paving with bituminous concrete on a cement concrete foundation (preliminary pavement) the roadway of Corlear avenue from West 230th street to West 231st street, adjusting eurb where necessary, together with all work incidental thereto. Total estimated cost \$3,850; assessed value of the real estate included within the probable area of assessment is \$137,242. Estimated cost for each 25-foot lot \$82.25.

1250. Acquiring title to the lands necessary for Putnam avenue East, from West 238th street to Van Courtlandt Park South. See Engineer's report.

1253. Acquiring title to the land necessary for Sylvan avenue, from West 254th street to Faraday avenue (Iselin avenue). See Engineer's report.

On May 19, 1913, the Local Board of Van Courtlandt, 25th District, initiated proceedings for constructing a sewer and appurtenances in Newton avenue, between West 253d street and West 260th

Van Courtlandt, 25th District, initiated apportenances in Newton avenue, between West 253d street and West 260th street; and in West 256th street, between Broadway and Newton avenue, and all work incidental thereto, which resolution was amended by said Board on July 28, 1913, so as to provide for constructing sewer and appurtenances in Newton avenue, between West 253d street and West 260th street, and in West 256th street, between Broadway and Sylvan avenue, and all work incidental thereto. It is now proposed that the aforesaid resolution of July 28, 1913, be amended so as to provide only for constructing sewers and appurtenances in Newton avenue, between West 253d street and Farraday avenue and between Mosholu avenue and West 260th street, with a temporary connection at West 256th street, together with all work incidental thereto.

thereto.

1195. For regulating, grading, setting curbstones, flagging the sidewalks, laying crosswalks, building approaches and erecting fences where necessary in Kingsbridge avenue, from West 230th street to the line between the Boroughs of Manhattan and the Bronx, together with all work incidental thereto. Total estimated cost \$7,300. The assessed value of the real estate included within the probable area of assessment is \$55,000. Estimated cost for each 25-foot lot \$456.25. Proceedings initiated by Board of Estimate and Apportionment for acquiring title February 20, 1913, and Commissioners appointed April 3, 1914.

Crotona. thereto. 1195. For

Crotona.

Crotona.

1207. For laying out on the map of the City of New York, East 147th street, from Austin place. to East 149th street. See Engineer's report dated May 23, 1914. Laid over on June 16, 1914, until July 14, 1914.

1235. Repairing concrete sidewalk where necessary on the easterly side of Jackson avenue, commencing at a point 170 feet north of Westchester avenue and extending 125 feet northerly, and 13 feet 6 inches in width, together with all work incidental thereto (in accordance with section 435 of the Greater New York Charter as amended). Also repairing concrete sidewalk on the northerly side of Westchester avenue, from a point 128 feet easterly from the corner of Jackson avenue, and extending 20 feet easterly, 22 feet in width, together with all work incidental thereto (in accordance with section 435 of the Greater New York Charter as amended). Total estimated cost \$430; assessed value of the real estate included within the probable area of assessment is \$75,000.

PRIVATE REALTY SALES.

Two or three interesting transactions Two or three interesting transactions were consummated during the week, one being the acquisition of the fifteenstory office building at the northeast corner of William and Cedar streets by the Casualty Company of America, and the other a prominent corner on Park avenue north of the Grand Central Terminal. The casualty company will occupy three entire floors after possession is obtained in the autumn. Speculative builders bought the southeast corner of Park avenue and 55th street, which will be improved. **Business Established 1853**

The total number of conveyances in Manhattan was 129, as against 125 last week, 27 having stated considerations totaling \$1,111,168. Mortgages recorded this week number 85, involving \$1,960,258, as against 57 last week, aggregating against 57 last week, aggregating

\$1,960,258. From the Bronx 14 sales at private contract were recorded, as against 10 last week and 8 a year ago.

The amount involved in Manhattan and Bronx auction sales this week was \$736,056, compared with \$1,120,394 last week, making a total since January 1 of \$25,348,109. The figures for the corresponding week last year were \$589,615, and the total from January 1, 1913, to Aug. 2, 1913, was \$36,955,811.

New Home for Casualty Company.

New Home for Casualty Company.

The Casualty Company of America, Edward W. Deleon, president, has bought from the 68 William Street Company, Robert E. Dowling, president, the northeast corner of William and Cedar streets, a fifteen-story mercantile structure, fronting 54.5 feet in William street and 124.2 feet in Cedar street. The Casualty Company now occupies space at 123 William street, and upon the expiration of its lease will move to the new building and occupy the second, third and fourth floors. The remainder of the building is rented, the ground floor beand fourth floors. The remainder of the building is rented, the ground floor being occupied by the Royal Bank of Canada. It was erected in 1901 at an estimated cost of \$785,000.

"Eldorado" in \$1,200,000 Deal.

"Eldorado" in \$1,200,000 Deal.

The Trio Realty Company, William A. Todd, Albert B. Kerr and W. K. Brice, have sold through the F. R. Wood-W. H. Dolson Company, the "Eldorado" apartment house, an eight-story building on plot 201x100, occupying the entire block on Central Park West, from 90th to 91st street. It has been held at \$1,200,000. The Trio Realty Company was organized last March when it purchased the property from the Audley Realty Company, Audley Clark, President.

Controls Block Front.

Controls Block Front.

Joseph P. Day, in conjunction with Theodore A. Kavanagh, have sold to Charles Gulden the four-story dwelling, 1001 Madison avenue, on lot 20x80. Mr. Gulden recently bought at the Hennessy estate partition sale the five four-story dwellings, on plot 82.2x100xirregular, at 1003-1009 Madison avenue and 44 East 78th street, which together with the Don Carlos apartment house, gives the buyer control of the entire block front on Madison avenue between 77th and 78th streets.

Standard Oil Co. Takes Title.

An important improvement for lower An important improvement for lower Broadway is under way as a result of the conveyance of title this week to the Standard Oil Company of New York, by the Morris Building Company, a subsidiary, of 44-50 Broadway. It is the site of the Tower Building recently torn down, fronting 81.10 feet on Broadway, 80.3 feet in New street with a depth of 80.3 feet in New street, with a depth of about 167.3 feet. The total area of the plot is approximately 13,000 square feet. Full details of this operation will be found elsewhere in the Record and

New Park Avenue Operation.

The Park avenue and 55th street corporation, a Massachusetts corporation with a capital of \$500,000, and represented as attorney by George R. Coughlan, has been formed to take over the southeast corner of Park avenue and 55th street, from the Swan-Brown Company. It is a plot 100x90 and will be improved with a twelve-story apartment house.

Arbuckle Estate Enlarges Plot.

Arbuckle Estate Enlarges Plot.

The Arbuckle estate, owner of the Hotel Margaret, has purchased through John F. James & Sons from the Lois M. Lane estate, the five-story apartment house, 91 Columbia Heights, Brooklyn, on lot 25x100, adjoining the hotel. The Arbuckle estate recently acquired other adjoining property, and it is rumored that an addition to the Hotel Margaret is contemplated. is contemplated.

More Space for Pictorial Review.

More Space for Pictorial Review.

Julius Kayser acquired from the Realty Holding Company the plot 216-220 West 39th street, 61x98.9, adjoining the twelve-story structure also owned by Mr. Kayser, and under lease for twenty-one years to the Pictorial Review Company. That company has arranged to lease a similar building to be erected on the newly-acquired plot. The two buildings will have a frontage of 123 feet.

Manhattan-South of 59th Street.

Are Your Brooklyn Holdings "Lemons"?

They shouldn't be. They wouldn't be if "properly managed." Possibly they are only "taken care of." Our modern systems and thorough organization, together with our 44 years' experience, assures "proper management."

The Welcome Man The One Who Delivers The Goods

Too much stress cannot be laid upon the subject of installing heat-ing systems, of any kind or make, properly in the situation upon which they are to perform their duties.

No system ever brought forth, or that ever will be invented, will in itself make up any lack of ca-pacity in boiler, piping or radiat-ing surfaces, or poor workmanship in erection. erection.

We Guarantee Our Work.

We design complete heating plants, furnish working plans and specifications and co-operate with owners, contractors, and architects solely to insure the perfect operation of our product.

A House, Like a Woman, Is As Old As It Looks

Why not get the Full Value of that Property, Mr. Landlord, Agent or Contractor, by treating the Walls with

"The Dependable Flat Interior Finish" for any surface

Your Requirements are:

First; a paint that will wear—LU-CO-FLAT is Durable, will not crack, peel blister or rub off.

Second; a paint that will go over either a new wall or one previously treated—LU-CO-FLAT can be applied over plaster, wood, metal, brick, burlap, paper, and any varnished, painted, or enameled surface.

Third; a paint that will not fade or become dull and dingy—LU-CO-FLAT holds its color, is made in twenty-eight shades, sold ready mixed, with full directions how to apply. Can be washed or scrubbed with soap and water as moisture has no effect upon it, a feature unique among interior finishes.

Fourth; a paint that is artistic and attractive—LU-CO-FLAT is the Aristocrat of wall finishes, artistic, cheerful, refined, charming, hygienic and durable.

Send for Color Card at once.

THE NEWBURG DREDGING CO.

Saum's Preservative

Makes CONCRETE Floors as Indestructible as Granite

Saum's Preservative prevents or stops disintegration. Concrete so treated resists acids, alkali, and is water, sun and wind-proof. Horses' feet, wagon wheels, hand trucks do not scrape or wear concrete floors after Saum's Preservative has been applied.

Easy to use, economical, efficient and lasting. Write for book of evidence. Our engineers will call upon request.

REAL ESTATE NOTES.

BURRILL BROTHERS have moved to 1157th av, Brooklyn, near President st.

GOODALE, PERRY & DWIGHT have been appointed agents for 1993 Bathgate av.

ADOLPH B. ZUCKERMAN, formerly with William J. Roome & Co., is now connected with Senior & Stout, Inc.

Senior & Stout, Inc.

LEON S. ALTMAYER has obtained a first mortgage loan of \$11,000 at 5 per cent. on the 4-sty apartment house at 1341 3d av.

HENRY BRADY, real estate auctioneer and broker, has moved his offices to 200 West 23d st, southwest corner of 7th av.

st, southwest corner of 7th av.

WILLIAM E. GOOD is the purchaser of 921 and 923 Trinity av, Bronx, a 5-sty apartment house, sold through the Duross Co.

M. H. GAILLARD & CO. have been appointed agents for 314-316 West 93d st, 2072-2080 3d av and the southwest corner of 8th av and 36th st.

J. ROMAINE BROWN CO, has been appointed agent of the "Bona Vista" apartment house at the southeast corner of 109th st and Riverside drive.

ROBERT F. BONSALL, formerly with William H. Whiting & Co., has opened a general real estate and insurance office at 233 Broadway.

M. MORGENTHAU, JR., CO, has negotiated a first mortgage loan of \$35,000 at 5 per cent., covering the northwest corner of Clay av and 167th st, a 6-sty apartment house, for the A. J. Schwarzler Co.

OCEANIC INVESTING CO. has loaned \$175,-000 on first mortgage for 5 years to the Friedman Construction Co., on the 6-sty apartment house being erected at the southeast corner of Fort Washington av and 161st st.

LEO J. KRESHOVER gave in part payment for 129 West 28th st, reported sold last week by Jacob and Everett Jacobs the two 4-sty dwellings on plot 40x98.9, at 308-310 West 25th st.

HARVEY I. UNDERHILL, of South Orange, N. J., obtained a building loan of \$240,000 from the New York Title Insurance Co., to be used in erecting a 12-sty mercantile building at 438 to 448 West 37th st, on plot 125x98.9.

THE CHURCH OF ST. CHARLES BORRO-MEO is the buyer of the dwelling 202 West 142d st, sold last week by Ennis & Sinnott through W. J. Huston & Son. The church and parochial school are located a few doors west of the property, which will be used as quarters for the teachers.

CHARLES F. NOYES CO. has obtained the following mortgage loans: for the White Realty Co. from Sullivan & Cromwell \$28,000 covering 228 Pearl st; for Capt, William M. Halsted from the Lawyers Mortgage Co. \$17,000 covering 11 Water st; and for Edward S. Savage from New York Title Insurance Co. \$14,000 covering 98 Pine st through to Depeyster st.

THE HOUSE OF CALVARY, now at 5 and 7 Perry st, is the buyer of the plot of 18 lots at the northerly intersection of Featherbed lane and McComb's rd, the sale of which by Phqebe L. Robinson was reported last week. The property will be improved with hospital buildings. The present location in Perry st is on the line of the extension of 7th av.

THE REPORT of the transfer tax appraiser of W. Burling Cocks, who died at Locust Valley in May, 1913, shows an estate with personalty amounting to \$235,704 and realty worth \$197,583. The 100-acre farm at Locust Valley was appraised at \$100,000. Mr. Cocks was a member of the real estate firm of Cocks & Willets, 49 Wall st.

E. A. McDOUGALL, president of the Queensboro Corporation, will sail on the Minnewaska, August 1, to visit London, Berlin, Paris and other large cities on the continent. He will make a study of real estate conditions in those places, and will meet F. Ray Howe, secretary of the company, who has been in Europe for several weeks. They will return August 27, on the Cedric.

COMMISSIONERS OF THE SINKING FUND have authorized the Controller to sell at auction properties in Brooklyn for which the city has no use, comprising the plot 70x200 extending from West 1st st to Ocean pkway, adjoining the Coney Island Railroad's right of way, at an upset price of \$10,500; also a parcel at Flatbush av and Sterling pl for \$35,000, and in the south side of Butler pl, between Underhill av and the plaza, for \$31,000.

REAL ESTATE APPRAISALS.

The following valuations were placed on real estate properties this week by the State appraisers in transfer tax proceedings. The amount specified does not in every cast indicate the equity of the decedent. It simply quotes the estimated market value of the realty, regardless of mortgages or other liens:

ESTATE OF FRANK W. CHAMBERLIN—premises 411 Convent av, \$17,500.

SILAS F. SIMPSON.—581-583 8th av, \$52,000.

PHEBE C. LAWRENCE—60 West 16th st, \$75,000; 63 West 9th st, \$20,000; 65 West 9th st, \$20,000; 65 West 9th st, \$20,000; 65 West 9th st, \$115,00.

FLORA E ROGERS—336 West 88th st, \$33,-

FLORA E. ROGERS—336 West 88th st, \$33,-000.

GEORGE W. BOHDE.—560-566 Hudson st, \$48,000; 412-416 Greenwich st, \$45,000; 117 Varick st, \$35,000; 190 West 10th st, \$15,000; 208 West 11th st, \$10,000; 105 West 42d st, \$40,000.

PAUL GUMBINER.—54 West 70th st, \$43,000. HENRY KRAUS.—59 Bleecker st, \$60,000; 40-42 Bleecker st and 308 Mulberry st, \$100,000; 1600 Shakespeare av, \$17,000; lot in Feather-bed lane, \$5,000.

OBITUARY

JOHNSTON MORROW, an insurance broker, died suddenly on Sunday last of heart disease at his residence, 118 Convent Pl, Yonkers, N. Y. Mr. Morrow was 40 years old and leaves his widow and two children.

JOHN McCOURT, a veteran of the Civil War, and for many years a real estate expert for the Commonwealth Title & Trust Co., died of heart disease on Monday, at his home in Philadelphia.

adelphia.

LOUIS ARNSTEIN died on Wednesday, aged 61, at his home, 941 Intervale av, Bronx. He was for ten years with the Register's office and for sixteen years with the Department of Water Supply, Gas and Electricity. He is survived by a widow, two sons and one daughter.

SETH MacARTHUR died on Monday at his home in Athens, N. Y. He was for many years with the State Insurance Department. He was a brother of Charles MacArthur of this city and a nephew of the late Senator Jacob W. Hoysrod.

SAMUEL MARKS, a retired real estate operator, died of general debility on Wednesday at his home, 2633 East 27th st, Brooklyn. He was 72 years old and leaves his widow and one daughter.

AUCTION SALES OF WEEK.

Except where otherwise stated, the properties offered were in foreclosure. Adjournments of legal sales to next week are noted under Advertised Legal Sales.

* Indicates that the property described was bid in for the plaintiff's account.

Auction Market.

Among the few properties sold at auction this week which went to others than parties in interest was 144 East 62nd street, a three-story dwelling which was acquired by John B. Clark, representing a client, for \$24,250. The New York Life Insurance Company, as plaintiff, bought 3300-3308 Third avenue, three six-story tenements, for \$80,000. The property is located at the northeast corner of Boston road. The most important offering in the Exchange Salesroom next week is 32 Broadway, a twelve-story structure, known as the Hudson Building. The property will be offered to satisfy liens aggregating about \$833,264.

Manhattan.

Manhattan.

The following is the complete list of property sold, withdrawn or adjourned during the week ending July 31, 1914, at New York Real Estate Salesroom, 14 and 16 Vesey st.

Money Well Spent

Every day in Brooklyn some already-built apartment house is made modern and convenient by the installation of electric light.

The owners of these buildings realize that the public is educated to the many advantages of electric service. They are quick to grasp not only the fact that vacant apartments rent quicker when electrically equipped, but also that tenants are willing to pay more for an electric-lighted apartment than for any other.

The money spent, then, to make the necessary installation is really not an expense, but an investment that pays large returns.

BUILDING MANAGEMENT

POWER GENERATING PLANTS FOR LOFT BUILDINGS

By WERNER NYGREN, Nygren, Tenney & Ohmes, Consulting Engineers

Conducted by Raymond P. Roberts, Building Manager For The American Real Estate Co.

A S a rule, owners and business managers do not look with favor on private power generating plants for or-dinary loft buildings. To a certain extent they are right, as it must be ad-

extent they are right, as it must be admitted that buildings which come strictly within this class are not the kind in which private plants can make an appreciable showing, unless the buildings are of considerable size.

There are a number of loft buildings in New York City and elsewhere which are supplied with electric current for light and power purposes from the street, and heated by low-pressure steam generated in their own boilers. Without question a majority of these buildings are either doing decidedly better—at least as well, or nearly as well—from the standpoint of economy, as if they had their own electric generating plants. Only a few of them would be better off financially for having their own private plants.

Undue Influence on Owners.

To draw the line with arguments deal-

Undue Influence on Owners.

To draw the line with arguments dealing with generalities is difficult; specific figures, honestly compiled, are an owner's best ouidance. The campaigns for and against private plants, while they are very interesting, are not, on the other hand, conclusive. Certain public utility corporations will frequently take the stand that a private plant will not prove a paying proposition, whereas the private plant operating companies will just as vigorously advocate a private plant under the very same conditions.

The plausibility of such arguments when advanced by specially gifted promoters, without being effectively offset by the other side, are known occasionally to have influenced owners to adopt the alternative, which they later on regret. When mistakes of this kind occur they are usually the result of the owners's inclination to listen to advice from interested parties who juggle figures right under his eyes to suit their arguments, rather than trust to the figures of engineers who have professional reputation to sustain, and are disinterested besides.

When a building project has devel-

utation to sustain, and are disinterested besides.

When a building project has developed to a stage that the size, character and service of the building is defined, it is merely a matter of figures to determine the operating cost either way, and in such a manner that the owner can make up his mind at a glance whether or not a private plant will be a paying proposition and worth his trouble to manage.

manage

Justification of a Plant.

Justification of a Plant.

The installation of a private plant cannot very well be advocated unless there is indication of a sufficient net earning above the total expenses chargeable to the plant to reimburse the owner for his trouble. In the expenses chargeable to the plant should be included the cost of operation, interest on the money invested in the plant, depreciation, as well as the rental value of the space given up to the plant.

Even when the figures point to a gain, unless it is so considerable that it leaves no doubt, it is well to be conservative and play safe. This can readily be done by reserving space and making the necessary provisions for a later installation of a plant, and in the meantime contract for electric current from an outside source for a period of a year or so. At the expiration of such a trial period, the owner will be able to determine with accuracy where he is at, and can then proceed without hesitation on whatever course he deems best.

WERNER NYGREN.

The requirements of loft buildings of the ordinary kind, in which little or no manufacturing is permitted, are of course much different from those mainly given up to manufacturing. Whenever extensive use of power and high pressure steam for manufacturing processes enter into the problem, and a so-called loft building becomes more of a factory than a loft building, a private power generating plant is usually, although not necessarily so, the better proposition.

Important Factors.

Important Factors.

In selecting his equipment, the owner of a loft building is often attracted to material and appurtenances which cost the least to install, and he also looks with favor on cheap help for the operation of his plant. Both are bound to be the most expensive in the long run. If he gets an honest deal at all he will get what he pays for, and no more. Although a loft building appears very simple when compared with an office building, there is not much difference between them when it comes to burning coal with efficiency, getting horse-power out of steam, and reducing to a minimum repairs resulting from poor material and stupidity in handling.

A power generating plant for a loft building, whether used for manufacturing or not, should be designed for endurance and economy in operation, and be ample in capacity so as to have snare boiler and electric generating units to insure a good unkeep and proper care of the plant. While it is not important in what part of the basement such a plant is located, so long as ample space is allotted for the installation of proper equipment, it is obviously best to have the boiler and the electric generating plant as close together as possible, and so located as not to encroach unnecessarily on rentable space or imperil the renting value of the lower portion of the building. Under no condition should a plant be crowded into an undesirable or inadequate space, or in any other way sacrificed for the sake of a few scare feet of rentable space, as sometimes happens to be the case. If the basement is desired for renting purposes to such an extent that sufficient space will not remain for plant equipment, a sub-basement to accommodate the power plant equipment may pay for itself, unless special ground conditions prohibit the building of such a

sub-basement from the standpoint of

In a building project which is to be a permanent investment, the installation cost of the plant is only important to the extent of eliminating useless expense. To sacrifice the quality of the plant, and thus lessen its endurance and economy of operation for the sake of reducing its first cost, is false economy.

Determining Factors.

Determining Factors.

In order that a private plant may become a commercial possibility, it is very important that the entire mechanical equipment be of good quality, of such design that the plant can be operated with the greatest possible economy, and that the available exhaust steam can be utilized to full advantage. About 80 per cent. of the heat in the steam generated for power purposes is usually available for heating purposes in the form of exhaust steam. To be able to put this by-product to proper use means a considerable saving, at least in the winter time. In summer, when the exhaust steam has to be wasted, except for what is used in heating water for boiler feed and domestic use, very little, if anything, can be gained by generating electricity with a private plant. It is only during the winter season that such a plant will make any appreciable showing, except, of course, when a building has an unusually large power requirement.

When the average power requirements of a building are such that the available exhaust steam will ordinarily accomplish the heating, the combined cost of generating power, light and heat is reduced to a minimum. This will, if the building is large enough, justify the existence of a private plant. In ordinary loft buildings, however, the conditions are often such that the available exhaust steam is insufficient for the average heating needs; hence the reason why it is not always advisable to install a private generating plant in such buildings.

A Suggestion.

A Suggestion.

A Suggestion.

The prevailing custom in loft buildings of moderate size of purchasing electric current from an outside source and generating steam at a low pressure for heating purposes, while it is often cheaper and quite as satisfactory as to operate a private generating plant, it does not necessarily follow that it is the most economical arrangement. It would be still more economical to have co-operative central plants for supply of electric currents, steam, hot water, etc., at a pro rata charge, according to quantities used.

In such plants a considerable saving would be possible. Less steam would be required for the operation of one consolidated generating plant of a given power than would be the case with a number of smaller plants of the same total power. Furthermore, less fuel would be required for a given amount of steam, due to the possibility of securing an equal, if not greater, amount of heat from a low grade of coal in a plant of this kind than would be possible with a higher grade of coal with individual boilers.

Co-operative Schemes.

Co-operative Schemes.

Co-operative schemes of this kind would not be altogether new in New York City. There are already existing cases where a number of buildings, owned or controlled by the same interests, are operated from one central plant. There are also cases where smaller buildings are supplied with power, light and heat from plants in

neighboring buildings to mutual advanneignboring buildings to mutual advantage. Moreover, co-operative associations with the same object in view were started years ago, when buildings were operated entirely by steam and lighted by gas. These associations owned and controlled central boiler plants, from which steam was distributed to the share-holding consumers.

In common with most enterprises started ahead of the times, these plants In common with most enterprises started ahead of the times, these plants were not, however, altogether successful. Proper and reliable means for measuring steam were unknown. This necessitated fixed charges to the individual buildings, based on estimated steam consumption, which led to disputes and dissatisfaction. The introduction of electricity for light and power in the buildings thus supplied with steam, and the added expense which this entailed, so increased the total operating cost that there was no longer any saving to speak of. To continue to generate steam solely for heating did not offset the added expense, as the antiquated equipment of these plants made it impossible to burn fuel with much more economy than in individual boiler plants of more modern type. The result of all this has been that the cooperative plant has not survived, despite the fact that the application of the principle was a step in the right direction.

Today, with meters and appliances

tion.

Today, with meters and appliances both for measuring and distributing steam, electric current, water, etc., there should be no mechanical difficulty in the way. The drawback would be the difficulty of organizing such co-operative associations and securing franchises for their operation. Still, even this may be hoped for in an age when co-operation is more and more looked upon as a business necessity.

THE CARE OF OAK FLOORS.

Correct Scraping and Finishing Essential to Permanent Beauty.

To Permanent Beauty.

If one only knows how, nothing is easier than the care of a well-finished oak floor. Water should never be used on a waxed or varnished floor. The surface may safely be wiped with a cloth dampened in tepid water to remove dirt and dust, but the dampness should be immediately taken up with a dry cloth.

One of the best mixtures for keeping a floor in good condition is the use of equal parts of sweet oil, turpentine and vinegar, well mixed, and rubbed on the floor with waste or a cotton or woolen rag. The vinegar will cut the dirt or grime worked into the finish from shoes; the sweet oil produces a lustre, and the

rag. The vinegar will cut the dift of grime worked into the finish from shoes; the sweet oil produces a lustre, and the turpentine promptly dries the moisture. This mixture need not be applied oftener than once a month to insure a floor finish that will resemble the sheen of a piano. Should wax finish become worn in spots from hard usage, a little of this mixture, thoroughly rubbed in, will renew the finish quickly.

The occasional use of a weighted floor brush, alone or with a piece of Brussels carpet placed beneath it, will assist in keeping the finish of an oak floor in good condition. Once a year, it is well to use a good floor wax and rub it into the floor with the aid of a brush, with or without a piece of carpet attached. Before the finish is worn down to the wood, an additional coat of wax should be applied and thoroughly rubbed.

Care Begins When Floor Is Laid.

Care Begins When Floor Is Laid.

Care Begins When Floor Is Laid.

As a matter of fact, the care of an oak floor should begin when the floor is originally laid. The laying of an oak floor is not difficult. Any first-class carpenter can make a good job, but some judgment and care is necessary in order to produce the best result. A sub-floor should be used under both the 13/16-inch and ¾-inch thicknesses. The sub-floor should be reasonably dry and laid diagonally. Boards of about 6 inches wide are preferred. These boards should not be put down too tight and should be thoroughly dried off and cleaned before the oak ly dried off and cleaned before the oak flooring is laid. It is well to use a damp-proof paper between the oak flooring and the sub-floor. Where sound-proof results are desired, a heavy deadening felt is recommended. recommended.

Oak flooring should be laid at an angle to the sub-floor. After laying and nailing three or four pieces, use a short piece of hardwood 2x4, placed against the tongue, and drive it up. The nailing of oak flooring is important. All tongued and grooved oak flooring should be blind nailed. The best floor made can be spoiled by the use of improper nails. The steel-cut variety is recommended for all blind nailing. For 13/16-inch use 8-penny steel-cut flooring nail; for 3%-inch use 3-penny wire finishing nail. The maximum distance between the nails should be: for 13/16-inch thickness, 16 inches, and for 3%-inch thickness, 10 inches. For even better results it is recommended that the nails be driven closer than indicated. closer than indicated.

How to Scrape the Floor.

After the oak flooring is laid and thoroughly swept, it is better to scrape it, in order to get the best results for a nicely polished surface. This scraping process can be done by the ordinary scrapers, such as used by cabinet makers, or by one of the many types of power or hand scraping machines that are generally used by contractors and carpenters. Always scrape lengthwise of the wood and not across the grain. A floor properly scraped looks very smooth, but it should be thoroughly gone over with No. 1½ sandpaper to obtain the best results in finishing. After this, the floor should be swept clean and the dust removed with a soft cloth. The floor is now ready for the finish.

The finishing of an oak floor is an important feature, upon which authorities fail to agree; but the question resolves After the oak flooring is laid and thor-

fail to agree; but the question resolves into a matter of cost, as to the color or brilliancy of finish desired. Personal taste, artistic or decorative effects are the guides for the floor finisher.

Grades of Oak Flooring.

Grades of Oak Flooring.

The "clear" grade of oak flooring should have a natural oak filler—color of oak. With the "select" and "sap clear" grades a light golden oak filler should be used, and after the floor is filled it should be gone over with a little burned umber mixed with turpentine to darken light streaks. This will make the "select" and "sap clear" grades look like the "clear" grade except that it will be slightly darker in color. In filling the "No. 1 common" grade a dark golden oak filler should be employed, and the light streaks should be darkened in the same manner as the "select" and "sap clear" grades. If a little care is used in laying this grade, splendid results can be obtained. be obtained.

he obtained.

First: Treat the floor with a paste filler of desired tone, to fill up the pores and crevices. To thin the filler for application, one has a choice of using turpentine, benzine, wood alcohol or gasoline to get the right consistency. When the gloss has left the filler, rub off with excelsior or cloth, rubbing against the grain of the wood. This will make a perfectly smooth and level surface. It keeps out dirt and forms a good foundation, which is the keynote for successful treatment of floors. Allow the filler twelve hours to set or dry before applying a wax or varnish finish. Never use a liquid filler on any floor.

Varnishes and Finishes

Varnishes and Finishes.

Varnishes and Finishes.

A wax or varnish finish can be used. The wax finish is preferred by many, due to economy and ease of renewing places that show the wear. The renewing can easily be applied by the house-keeper or servant.

Wax Varnish.—The best method for applying the wax is to take cheesecloth and double it to get a little more thickness; then make it into a sort of bag. Put a handful of wax inside of this and go over the floor thoroughly. You will find that you can work the wax through the meshes of the cheesecloth to give an even coating over the floor. This prevents too much wax in spots and wasting it. After the floor has been gone over with the wax and allowed to dry, say about twenty minutes, it is ready for polishing. Rub to a polish with a weighted floor brush, first across the grain of the wood, then with it. (A clean, soft brush can be used in place of the brush, if desired.) Then a piece

of woolen felt or carpet should be placed under the brush to give the finishing gloss. After waiting an hour, a second coat of wax should be applied in the same way as the first and rubbed to a polish.

polish.

Varnish Finish.—This is usually more expensive than the wax finish, but it gives a very hard surface, yet at the same time it is elastic. Two or three coats should be applied after the application of the paste filler. Each coat should be thoroughly rubbed with oil and pumice. Any of the standard hardwood flooring varnishes are recommended. mended.

mended.
Floor Oil Finish.—When a high-class finish is not desired, a very economical finish can be had by the use of a light flooring oil, that is made expressly for this purpose by many paint and varnish houses and oil makers; it serves as a filler as well as a finish and is strongly recommended for oak flooring in public institutions, office buildings and stores. This oil keeps the dust from rising and preserves the floor.

Definition of Grades

Definition of Grades.

Clear.—Shall have one face practically free of defects, except three-eighths of an inch of bright sap; the question of color shall not be considered; lengths in this grade to be 2 feet and up, not to exceed 15 per cent. under 4 feet. Generally used in high-class residences, hotels, apartment houses and clubhouses.

Sap Clear—Shall have one face prac-

Sap Clear.—Shall have one face practically free from defects, but will admit unlimited bright sap. The question of color shall not be considered; lengths in this grade to be I foot and up. Adaptable for use as an economical substitute in this grade to be I foot and up. Adaptable for use as an economical substitute for clear quartered where a dark finish is desired. These grades make a flooring equally durable as the first grade in high-class residences, hotels aparting

equally durable as the first grade in high-class residences, hotels, apartment houses, churches and clubhouses. Select.—May contain bright sap, and will admit pin worm holes, slight imper-fections in dressing, or a small tight knot, not to exceed one to every 3 feet in length; lengths to be 1 foot and up. This may be used in medium-priced resi-dences, hotels and apartments, schools, office buildings and stores.

The Assessment Rolls.

The Assessment Rolls.

In order that the assessed value of buildings may readily be compared, the Deputy Tax Commissioners have been instructed to insert in their field books what is known as the 'building factor.' It is obviously impossible to compare the assessed value of buildings of different sizes without the use of some comparable figure. The building factor is this comparable figure and it represents the value per square foot of floor surface of every building. An ordinary loft building may be assessed at the rate of \$2.50 per square foot of floor space, and the assessed value of this building may then be compared with the assessed value of any other loft building regardvalue of any other loft building regardless of differences of size by comparison with the factor of value in each case. The President of the Tax Board says: "The Deputies are instructed to inform

The President of the Tax Board says:
"The Deputies are instructed to inform anyone who inquires the factor of value used in determining the assessed value of any building. In many cases where buildings are obsolete or greatly depreciated, the factor of value is very low as compared with a good building of like kind suitably located. The factor of value immediately exhibits the extent of the allowance made for depreciation or obsolescence.

"The efficient use of the publication of land units and assessment rolls, together with the detailed information freely offered to taxpayers, is all designed as a complete system of publicity to the end that the most effective cooperation may be secured with all persons informed as to value and interest in assessments. It is confidently expected that this wide open policy of the fullest publicity will both tend to the correction of errors of fact or of judgment and to the satisfaction of all property owners. All fairfact or of judgment and to the satisfac-tion of all property owners. All fair-minded men are willing to contribute their fair share, and when they can see for themselves that their share is fairly determined and that their property is assessed in harmony with other realty."

USEFUL APPLIANCES

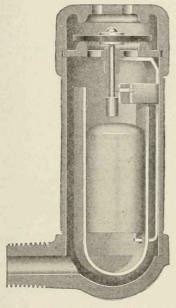

Novelties, New Applications of Pamiliar Devices and the Trend of Invention, Designed to Aid the Architect, Builder and Building Manager, Described Without Regard to Advertising Consideration.

A CCORDING to an announcement made by the Koalsave Vacuum Valve Co., Park Row Building, any steam-heating plant can be transformed announcement into an economical vapor system merely by the application of a certain type of air control which that company is in-troducing into this market. It is said to possess the added virtue of being noise-less in operation, sans packing and is fool-proof fool-proof.

The system merely creates a vacuum in the ordinary steam-heating equipment identical with that which features the void characterizing the vapor system of heating, at merely nominal first cost.

The valve shown is simple in construction. The disc operating between

an outer or steam seat, and an inner or vacuum seat is raised from the seat by the slightest pressure (less than one ounce per sq. in.) from within the valve,

but is prevented from closing on seat by the hook on one extremity of the by the hook on one extremity of the thermostat - metal tongue engaging shoulder on valve stem, thus providing ample passage around the disc, through holes the inner seat and in top of valve, for the free escape of air.

for the free escape of air.

Steam entering the valve causes extremities of the thermostat-metal tongue to separate, disengaging the shoulder on the valve stem and permitting the disc to close on the seat, thus preventing es-cape of steam. Water entering the valve causes the inverted cup, attached to tongue, to rotate the tongue about its hanger, disengaging hook, allowing the valve to close against the escape of water. Disc is closed on seat when pressure within valve is equal to or less than that of the atmosphere, preventing air entering valve, thus creating and maintaining a vacuum.

This device is said to heat all radia-

tors almost instantly as all the air is taken out of the system and kept out. Hence this device should appeal strongly to apartment house and hotel man-agers where complaint is frequently made that the radiators do not readily made that the radiators do not readily respond to the steam pressure supplied the system. Incidentally the coal bills are said to be reduced, for the simple reason that greater efficiency is given to the steam plant requiring a smaller amount of coal to generate the necessary supply of steam considerably quicker than is possible under the ordinary system.

It is an established scientific fact that a given amount of coal will convert a pint of water into 25 cubic feet of steam at one pound gauge pressure, while a slightly lower amount of coal will convert the same pint of water into 75 feet of steam in 18 inches of vacuum. If some method is employed to produce a

vacuum in a heating system, therefore, it is logical to expect a decided lowering in the amount of coal required to put a working pressure into a heating system. The manufacturers of this device aver that the valve they are introducing will permit the generation of three times more steam with the valve installed on radiators than the same heating plant can produce with the identical amount of coal under the ordinary steam-heating system.

New Thermostatic Trap.

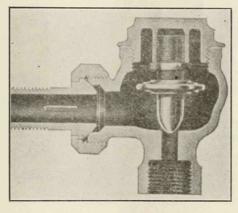

New Thermostatic Trap.

ILLUSTRATED herewith is a new thermostatic trap that is being introduced by James P. Marsh & Company, of Chicago. The device was designed with the idea of supplying a much-needed small unit control for moderate-sized heating equipments.

The principle of construction is similar to that of other Marsh reflux traps except that it is applicable to much smaller radiators and coils. It is especially serviceable on two-pipe gravity installations and vapor heating systems and is made entirely of metal, so that the wear incidental to the use of rubber and fibre for packing is eliminated.

The diaphram is made of phosphor bronze spun directly on the post at the top, making a tight container for the volatile fluids and a sensitive diaphram, securing a perfect automatic action of the trap. Another feature of the trap, which the manufacturers say is exclusive with this device, is a reservoir which is designed to act as a cushion to relieve the force of the expanding member. lieve the force of the expanding member

This reservoir is simply a post with an interior chamber for the expansion of the gases generated in the diaphram. The upper end is threaded, which makes it adjustable to permit the diaphram to be raised or lowered. It is furnished either with concealed adjustment, as

shown, or with outside adjustment. It is supplied with ½-inch angle pattern with nickle-plated brass body and has a capacity of 100 sq. ft. of cast iron radia-

Finishing Floors by Varnishing.

THE most essential things in floor finishing, next to the selection of the right varnish are: First, to see that the floor is absolutely solid; that is, there must be no give to it when stepped upon, for if such is the case it will crack the finish in a new floor, while in an old refinished floor it will break the finish and will work the filler out of joints. Second, the floor must be perfectly smooth, clean and dry, otherwise a good finish cannot be obtained, even with the very best material. For treating new floors, such as hard or close grained woods, like oak, chestnut, maple and hard pine, the best way is to fill open grained wood with a good paste filler, and when this is done, give a good thin coat of floor varnish, giving ample ishing, next to the selection of the filler, and when this is done, give a good thin coat of floor varnish, giving ample time to dry hard, and sandpaper; follow. after dusting, with a good, full coat of varnish, and for a right good job give a third coat. If this is to be rubbed, let it dry hard throughout, then use crude oil and pumice. For hard pine, use one coat of shellac before varnishing, so as to keep back the sap or pitch. The chief requisite for good wear on a finished floor, however, is the selection of the varnish, which must not readily

mar or scratch on being walked over.

To refinish an old floor, the first thing is to get rid of the old finish or whatever may be left of it, and here is where the difficulty lies. If it can be removed with a scraper or an old plane, it is not such a bad undertaking, but when a remover is used it has to be got rid of, and if not done thoroughly there will be no end of trouble. Otherwise, proceed same as for a new floor, excepting as to filling, which is not necessary. ceed same as for a new moor, except-ing as to filling, which is not necessary, but there may be most likely cracks and open joints, caused by the shrinking of the lumber, that require filling, and for this purpose we would suggest one of the non-shrinkable crack fillers on the

Improved Steel Lath.

INTEREST has recently been aroused in the metal lath market by the is-

In the metal lath market by the issuance of patents to Martin Kuhne, of Portland, Ore., for a system of metal lathing that is said to have novel features. It is about to be introduced by Sasher & Bondurant, Portland, Ore.

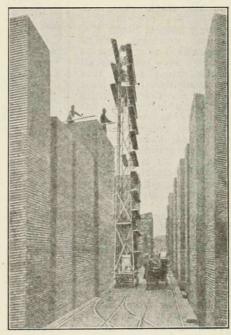

There are numerous steep corrugations and keys running parallel its entire length, with openings to allow the thinnest coat of plaster to pass through and cover the rear side. Another feature is the fact that either side is right side in putting it on, so that even an unture is the fact that either side is right side in putting it on, so that even an unskilled laborer can make no mistake in placing the key side. The inventor asserts that a marked saving in labor is made possible by the versatility of the lath, as fibre or hair plaster is not necessary to obtain perfect security, as the lath provides ample opportunity for even the thinnest plaster to key securely. The supports, it is said, may be set up to 24-inch centers and even at that up to 24-inch centers and even at that distance it cannot sag or bulge.

A Forty-Foot Piler.

L UMBER interests trying to solve the problem of cutting down labor cost on their distributing yards may be interested in a device that is being introduced by the Hilke Stacker Company, I Broadway. It consists of a portable machine that will stack lumber or timber of any size or weight up to forty feet. It is shown in operation in the ac-It is shown in operation in the ac-

companying cut.

The advantage claimed by the manufacturers of this device is that it reduces the area covered by stacks from 50 to 75 per cent., cuts down team mileage, alley mileage, pile bases and roof-

The machines are tight, strong ings. The machines are tight, strong and durable, according to the inventor. They are made to operate either on wide tread wheels or track. The lumber is hoisted by an endless chain system, so that instead of a few boards only being in transit from wagon to stack at a time, as many as thirty can simultaneously be moving to packers' hands on the pile.

CURRENT BUILDING OPERATIONS

Arcade to Be Erected by Standard Oil Company, at 50 Broadway, on Site of Old Tower Building.

A NNOUNCEMENT is made by the Standard Oil Company of New York that plans have been accepted and adopted for the improvement of the

and adopted for the improvement of the plot at No. 50 Broadway, for years occupied by the Tower Building, an early example of steel frame construction.

Realizing that there already exists an over-plus of office space below Cortlandt street, with hundreds of thousands of square feet soon to be added to the available supply; and further that in the natural course of events to throw more floor space for office purposes on the market at this time or in the near future, would simply result in additional disaster to normal rates, the Standard Oil Company concluded to wait until demand has caught up with supply and to bide the hour when office buildings of either the normal or the "skyscraper" variety were in sufficient demand to offer to capital a reason-

"skyscraper" variety were in sufficient demand to offer to capital a reasonable excuse for investment. But to carry their property against such a time as demanded its full development, or rather how to make it carry itself, was a problem of no little moment where, as in this case, the bare land value is estimated at more than \$1,500,000.

The situation was carefully studied by experts, with the result that plans have been adopted for a typical Arcade building. It will be called the "Standard 'Arcade." It is to be observed that this busy section of Broadway, Broad street, Trinity Place and William street, below Cortlandt street, is poorly supplied with retail shops. New street below Wall offers the single exception. Up to the present time banking houses, Stock Exchange concerns, ships' companies and express agencies have taken up all of the street space that was available. It has been difficult for the merchants to "break in." This has been due to two factors: First, the concerns above mentioned have required and been willing to pay a good rate for large space and secondly the architectural plans of the buildings in this section were not such as to properly provide for the needs of the retail merchants.

Recognizing these conditions, the

erly provide for the needs of the retail merchants.

erly provide for the needs of the retail merchants.

Recognizing these conditions, the Standard Oil Company developed plans for a building which would meet the requirements of the merchants and at the same time be one which would provide great service to the public. Both of these elements are covered by the Standard Arcade as planned.

The block from Exchange Place to Beaver street is one of the longest on Broadway in the downtown district. The stretch from Beaver street to Exchange Place is 655.2 feet without a direct "short cut" between these two important highways south of the Astor Building located at the corner of Exchange Place and Broadway.

Such retail shops as exist in this district are generally to be found below the Broadway level on corridors or in entrances to subway or elevated stations. The business population below

Wall street alone would suggest some-

Wall street alone would suggest something in the way of further convenience to the public, with considerable profit to the merchant who could locate "on the street."

It is to be remarked that New York City has been backward in recognizing the value of Arcade buildings. The European cities long since adopted this character of development for real estate in important centers, Edinburgh, London, Paris, and Milan and Moscow, all have famous arcades filled with small shops, paying large rents and doing business adequate to the demands of the several landlords. In our own country the arcades of Cleveland and Pittsburgh are well established and are paying propositions.

The walls of the Arcade are to be of iron and glass between marble pilasters which support the vaulted ceiling. The ceiling will be coffered, while the floor is to be of marble decorated with mosaics. The two upper floors, above the Aracade, are to be used exclusively for office purposes. Large elevators are being installed. The ceilings of the office floors are to be 12 feet in height. All offices are so arranged as to have outside light and ventilation. The corridors are to be laid with marble floors, and the walls are to be wainscoted with marble to the height of seven feet.

The building is to be fire-proofed throughout. The Broadway facade is to be of iron and glass enclosed in a frame of white marble composed of engaged columns supporting an entablature of Roman Doric order. The New street facade is to correspond in several designs and will provide a maximum amount of light for offices and stores.

Burton Thompson, bropropositions.

It was determined at the outset that the new building should be an ornament to the section; a work of art in itself

THE PROPOSED STANDARD ARCADE AT 50 BROADWAY.

with the embodiment of all the practical features which would appeal to merchants and tenants for office space. H. Craig Severance and William Van Allen have been employed by the Standard Oil Company as architects. They have developed plans for a most attractive improvement for this space. The building will be three stories on Broadway and four stories in New street. There will be about 12,000 square feet to each floor and the Arcade will be 20 feet in width by 73 feet to the top of the arch. The Arcade will be entirely open from Broadway to New street. The latter level will be devoted to stores in New street and a restaurant space of about 7,000 square feet at the Broadway end of the building.

The Broadway level on both sides of the Arcade will be devoted exclusively to commercial purposes and will be subdivided into spaces for shops of various kinds. The depth of stores from either side of the Arcade proper is about 30 feet. The height of the ceiling in Arcade shops is 25 feet. It is prowith the embodiment of all the practical

posed to have galleries or mezzanine floors where required. The Arcade will be lighted and ventilated from a large central court directly above and is so arranged as to give outside light and ventilation to the stores along the Ar-

The walls of the Arcade are to be of

Burton Thompson, broker, 7 Wall street, is representing the Standard Oil Company of New York in the management of the property.

A Queens Terminal Market.

The Chamber of Com-merce of the Borough of Queens has appointed the following Terminal Market Committee to co-operate with the members of the Market Committee of the Board of Estimate to study the market situation with the view of establishing public markets in the Bor-

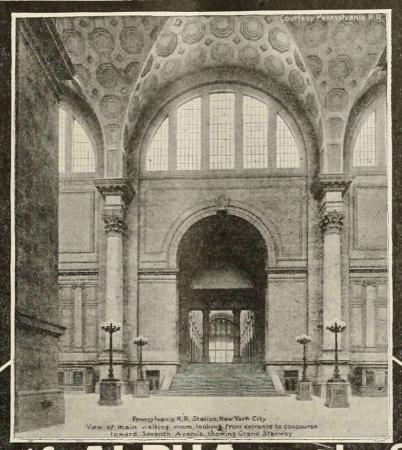

the view of establishing public markets in the Borough of Queens:

Michael J. Degnon, president of the Degnon Terminal Co., chairman; Geo. J. Ryan, vice-president of the Queens Chamber of Commerce; A. L. Langdon, traffic manager of the Long Island Railroad; John Adikes, mentant, Jamaica; Frederick Russell, chairman Commerce Committee.

Complete plans have been prepared by the Long Island Railroad for the establishment of a public market, on the west side of Dutch Kills Creek, between Borden avenue and Hunters' Point avenue. These plans include in addition to a general market, a fish market, meat and vegetable warehouse, fruit warehouse, etc., where supplies can be received by train and by boat from all parts of the country and be available for immediate distribution to any part of New York City.

An estimate of the complete cost of this market is \$3,500,000. The Long Island Railroad owns the land, comprising over four blocks, and is willing to co-operate in a plan for financing the

Island Railroad owns the land, comprising over four blocks, and is willing to co-operate in a plan for financing the erection of these market buildings. Such a market would have both all rail and water communication, and would not be limited in space. It would be a big central distributing depot, and there would be room for sales rooms and cold storage plants.

Specify ALPHA and be SURE

This great waiting room—one of the most impressive among the world's railroad stations—demonstrates the possibilities in combining the beautiful with strength and permanence. The author of "The Concrete House and Its Construction" says of this room:

"Above the costly Travertine stone, imported from Italy, the interior walls are faced with concrete, colored and cast in imitation of this stone. Even experts have been deceived as to the point where the stone ends and the concrete begins. The economy and utility of concrete for architectural purposes is strikingly exemplified in this magnificent building."

ALPHA PORTLAND

The High-Water Mark of Quality

was used in the construction of the P. R. R. Terminal to the extent of over 250,000 barrels. Exacting tests showed, as they always do, that ALPHA could be depended upon for strength, uniformity of composition, thorough burning, fine grinding and proper ageing.

In great structures everywhere—in the New York Aqueduct; in the Bush Terminal Buildings; in the Union Station, Washington; in great sea walls, dams, and railroad bridges; in government forts, piers and dry docks—wherever the demand is for the most uniform and the highest quality, ALPHA Portland Cement has more than met all requirements.

The production of high-grade Portland Cement requires long experience and the exercise of the greatest care. ALPHA Cement represents 23 years of experience. In every ALPHA plant, chemists are real dictators. They make hourly tests throughout the process of manufacture, to keep ALPHA up to the standard that represents the high-water mark of quality. Neither sharp competition nor zeal for impressive output at low cost is allowed to lower the ALPHA standard.

Six great plants on six trunk line railroads, one with private docks directly on the Hudson River, with a daily capacity of 25,000 barrels and storage for 2,000,000 barrels, insure prompt shipments of thoroughly seasoned cement at all times.

ELEVATOR REGULATIONS.

Building Code Revisers Ask Modifica-tions for Private Dwellings.

EGULATIONS for elevator enclo-Regularions is a subject that will soon be taken up in its order by the Building Committee of the

der by the Building Committee of the Board of Aldermen and the editor of the new building code, Supt. Miller. The requirements of the present building code and the proposed code of April, 1912, which latter was prepared by the Joint Committee of City Departments, are considered by many architects as excessive, and the committee has received requests for modifications.

Speaking of the subject this week Supt. Miller said that it was being said by those in favor of modifying the law that the fire hazard in private houses is mostly confined to the cellars and basements, where it is practical to build elevator enclosures with eight-inch walls, but above the basement it is claimed that conditions change, and every inch of thickness of the elevator enclosure is a serious matter. The present requirement of a minimum thickness of wall of four inches renders the installation of elevators in many private houses impossible.

Points for Consideration.

By various architects and builders Mr.

Miller has been asked to give consideration of the following points:

"The stair halls of private houses are not fireproof and the stairs are open—the result is a non-fireproof shaft of large size from top to bottom of the

the result is a non-fireproof shaft of large size from top to bottom of the house.

"Any elevator enclosure which adjoins and connects with this non-fireproof hall and which does not increase the fire hazard must be built according to the excessive fireproof requirements of the existing Building Code.

"These elevators in most cases are located either behind the stairs against the wall or in the center of the house with the entrance from the hall. In many cases existing non-fireproof dumbwaiter shafts are fireproofed and used for elevator enclosures, thus reducing existing fire hazard.

"Further, the code requirements are not consistent, for after elevator enclosure is built as required, there may be placed in the most vulnerable positions—the door openings—wood doors covered with sheet metal only on the elevator side of enclosure, leaving the wood exposed on the outside!

Fire Hazard Is Slight.

Fire Hazard Is Slight.

Fire Hazard Is Slight.

"The fire hazard from a private house elevator is very slight; these elevators are automatic in their working and their mechanism requires that all the elevator doors be closed at all times or the elevator will not move.

"The Building Code properly requires that the electric elevator mechanism be enclosed in a fireproof room, so that the elevator constitutes no fire hazard to the building, as the entire installation at all

building, as the entire installation at all times is safely guarded or houses within a fireproof enclosure.

times is safely guarded or houses within a fireproof enclosure.

"The Building Code should be revised to permit of some form of enclosure for private house elevators that would permit of their being erected inside existing closets, etc. For example, a skeleton steel frame with horizontal bracing spaced not more than 2 feet apart; expanded wire lath securely fastened to the steel frame and covered with 2 inches of any of the patent plastering mortars with 25 per cent. of Portland cement added.

"Or a steel skeleton frame with no unsupported panel more than 7 feet 6 inches high filled with an approved 2-inch gypsum block laid with gauged mortar. These requirements need not be confined to existing buildings, as they are good and sufficient for both new and old private houses.

"The present building code should be revised in regard to short run elevators in business buildings. The present code says all elevator enclosures must extend not less than 3 feet 6 inches above the roof. Where a tenant in a store

occupies the second floor and wants a private elevator this requirement cannot be met. The proposed code prepared by the Joint Committee on City Departments in April, 1912 (section 26, clause 5) took proper cognizance of this question." this question.

NO ARCHITECTS SELECTED.

In this department is published advance information regarding building projects where architects have not as yet been selected.

MANHATTAN.—A client of Joseph F. O'Donnell, 141 Broadway, contemplates the ertion of a 10-sty apartment house at the soutwest corner of Convent av and 141st st. architect selected.

WALTON, N. Y.—The Board of Education of Walton, W. R. Reynolds, trustee and chairman of building committee, is considering the erection of an addition and alterations to the school at this place, or the erection of a new school. Nothing definite has been decided and an architect has not been selected.

NEWBURGH, N. Y.—St. Mary's R. C. Church, William R. Hayes, pastor, 180 South st, Newburgh, is contemplating the erection of a school building on South st, but it is probable that the project will not go ahead for some time. No architect has been selected.

PLANS FIGURING.

APARTMENTS, FLATS AND TENEMENTS. BRONX.—Benjamin Schneider, 30 West 182d st, owner, is taking bids on all subs for a 5-sty flat for 25 families at the southwest corner of Featherbed lane and Nelson av, from plans by the Tremont Architectural Co., 401 East Tremont av, to cost \$55,000.

MANHATTAN.—Cohen & Felson, 329 4th av, Manhattan, are taking bids on \$20,000 worth of alterations to the 5-sty tenement 130 West 134th st, for Arthur M. Bullowa.

BROOKLYN.—M. A. Cantor, 39 West 38th st, has completed plans for an apartment, 50x100, on the south side of 39th st, 50 ft. west of 6th av, for M. Kornblum, 1341 46th st, Brooklyn, to cost about \$24,000. The owner will build and is taking bids on subs and materials.

DWELLINGS.
MANHATTAN.—Charles A. Platt, architect, 11
East 24th st, is preparing plans and will be
ready for bids about August 3 for a brick and
stone residence to be erected at 9 East 61st
st, for John T. Pratt, 43 Exchange pl. E. E.
Seelye, 101 Park av, is steel engineer.

POUGHKEEPSIE, N. Y.—Simon King, 1 Franklin st, will soon take bids on separate contracts for a 3-sty brick lodging house on Cannon st, west of Academy st, from plans by De Bois Carpenter, 45 Market st, to cost \$25,000.

LONG BEACH, L. I.—George Bartlett, architect, 103 Park av, Manhattan, is taking bids on a 216-sty terra cotta block and stucco residence at this place for Louis Hones, care the archi-

SCARSDALE, N. Y.—Fountain & Choate, 110 East 23d st, Manhattan, are figuring the masonry and carpenter work for a 21%-sty hollow tile and stucco non-fireproof residence, 25x112, on the Post rd for A. R. Loveridge, care of Arbuckle Coffee Co., Old Slip and Water st, Manhattan, from plans by Upjohn & Conable, 456 4th av, Manhattan.

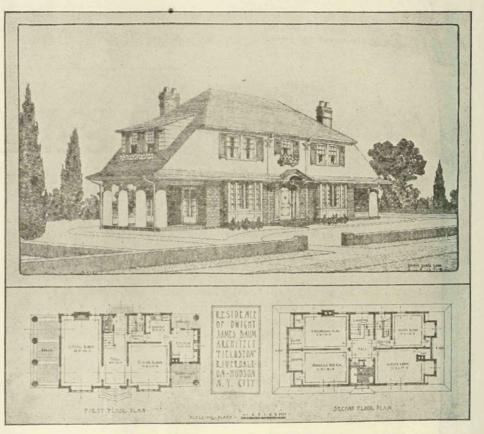

WHITE PLAINS, N. Y.—W. S. Philips, architect, 103 Park av, Manhattan, is taking bids on the general contract for a 2½-sty frame residence at Gedney Farms for Mary Whitney, New York Post rd, White Plains, N. Y.

GREENWOOD LAKE, N. J.—The Ringwood Company, R. M. Ekings & Co., agents, 152 Market st, Paterson, N. J., is taking bids for seven frame cottages to be erected at this place from plans by Robert C. Hutchinson, 126 Liberty st, Manhattan. The Harriman Industrial Corporation, Harriman, N. Y., is figuring the general contract and desires bids on subs.

BROOKLYN.—J. S. Kennedy, architect, 157 Remsen st, is taking bids on the general con-tract for a 3-sty brick non-fireproof convent on the north side of Metropolitan av, 148 ft. west of Bedford av, for the Church of Our Lady of Consolation, Rev. Father Alexius Jarka, pas-tor, 184 Metropolitan av. Brooklyn, at an esti-mated cost of about \$18,000.

COLD SPRINGS HARBOR, L. I.—Murphy & Dana, architects, 331 Madison av, Manhattan, will be ready for bids on general contract about July 31, from a selected list of bidders, for a 2½-sty brick fireproof residence and garage at this place, for Donald Scott, 9 East 9th st. Charles Leavitt, 220 Broadway, Manhattan, is landscape architect and Clark, MacMullen & Riley, 101 Park av, Manhattan, is heating, lighting and plumbing engineer. Cost, about \$125,000.

A NEW RESIDENCE AT FIELDSTON

The new home of Architect Dwight James Baum at Fieldston, the development of the Delafield estate at Riverdale-on-Hudson, shows an unusual design, its motives being derived from the old Dutch Colonial farmhouses found throughout Pennsylvania. It is built of Tapestry brick and hollow tile, the first floor has its face brick laid in Dutch bond and yellow mortar joints, while the second story, which is separated from the first by a small projecting roof, is covered with light gray stucco. The green shingle roofs come down to the ceiling line of the porches, where they are supported by large stuc-

The porches and terraces co columns.

co columns. The porches and terraces are of tapestry brick and tile.

The interior is kept Colonial in character by its white enamel finish and mahogany doors throughout, while the main hall and dining room are paneled after old Georgian models. A vista is obtained through the main rooms of the first floor from porch to porch, and from entrance front to garden front. The kitchen, while small, is compact, and with three exposures is well ventilated. A grade entrance at the rear permits entering direct to the service stairs and rooms without entering the rest of the house.

FACTORIES AND WAREHOUSES.

PAUTORIES AND WAREHOUSES.

POUGHKEEPSIE, N. Y.—The Bridgeport Construction Co., M. R. Aldrich and W. F. Lent, 236
Main st, Poughkeepsie, is taking bids on subs and materials for the 2-sty fireproof warehouse on Tulip st, from plans by William J. Beardsley, 49 Market st. Work will start about Sept. 1.

LONG ISLAND CITY.—The New York & Queens Light & Power Co., 444 Jackson av, is taking bids on the 2-sty brick sub-station at 4 Hamilton st, near Harris av, from plans by W. W. Knowles, 35 West 39th st, Manhattan. Jacob & Youngs, 116 West 32d st, are figuring.

HOSPITALS AND ASYLUMS.
TROY, N. Y.—William E. Clark, architect, 506
Fear Building, will take bids about August 1
for an addition to the Leonard Hospital, at 6th
av and 14th st, to cost \$35,000.

MUNICIPAL WORK.
OTISVILLE, N. Y.—The city of New York,
Department of Health, is taking bids until August 5, for structural steel necessary for the

NEW MUNICIPAL BUILDING, NEW YORK CITY Largest Municipal Building in the World

REMEMBER IT'S WATERPROOF Damp Resisting Paint

No. 232 "R. J. W." was selected for the dampproofing of this structure, owing to its unsurpassed "service records" in every type of building construction, from the humblest dwelling to the most monumental government and private buildings.

This grade of "R. I. W." bonds perfectly with plaster, prevents the penetration of dampness, saves the cost of furring and lathing, and prevents the migration of vermin.

Toch's Red Book contains data of value to every architect and builder. Send for a copy.

NEW JERSEY NEWS.

Middlesex, Union, Hudson, Essex, Bergen and Passaic Counties.

The plans of Apartments, Flats and Tenements published herein have been approved by the Board of Tenement House Supervision of the main office. Newark, N. J., to be erected in these counties for the week ending July 25. The location is given, but not the owner's address:

WEST NEW YORK.—Francesco Malzone, 512 10th st, one 2-sty frame, alteration, \$500; Ber-nard Hughes. s s 22d st, near Park av, one 3-sty brick, \$8,000.

IRVINGTON.—John L. Zander, 136 19th av, the 3-sty frame, \$6,000.

HACKENSACK.—Cornelius V. R. Bogert, 248 State st, twelve 3-sty brick, \$30,000. ORANGE.—Joseph Franchino, 48 Cone st, one 3-sty frame, alteration, \$1,000.

JERSEY CITY.—National Corp. of N. 765 Ocean av. one 3-sty brick, \$8,000; Gorlin, 64-66-70 Clifton pl, three 3-sty br \$84,000.

\$84,000.

TOWN OF UNION.—Charles Heintzmann, 524-526 Morgan st, two 3-sty brick, \$16,000; Thomas Denehy, n s Union pl, 430 w of Boulevard, one 2-sty brick, \$7,000.

PASSAIC.—Nathan Riskin, 205-207-209-211-213 Monroe st, five 3-sty brick, alteration, \$3,400.

PATERSON.—William J. Bibbings, 28 Arm-y pl, one 3-sty frame, \$6,000.

ory pl, one 3-sty frame, \$6,000.

NEWARK.—Isriel Green, 39 Blum st, one 3-sty frame, alteration, \$500; Angelo Colotrello, 37 Nesbit st, one 3-sty frame, alteration, \$800; Elizabeth Kalie, 15 Cedar av, one 3-sty frame, \$6,000; Dina Mull; 916 Bergen st, one 3-sty frame, \$6,000; Richard F. Mattia, 39 Crane st, one 3-sty frame, alteration, \$400; Max Levy, 309 Avon av, one 3-sty frame, \$6,000; John Marlove, 910 South 18th st, one 3-sty frame, \$6,000; Herman Meyer, 323 18th av, one 3-sty frame, alteration, \$2,500.

APARTMENTS, FLATS AND TENEMENTS.

NEWARK, N. J.—Simon Cohen, 163 Springfield av, Newark, has completed plans for the 3-sty brick flat and two stores at 371 South Orange av, for Louis Zapoikov, 54 16th av, Newark, at an estimated cost of about \$8,000. The owner will build.

DWELLINGS.

MORRISTOWN, N. J.—Harrie T. Lindeberg, 2 West 47th st, Manhattan, has plans for a 2½-sty residence for Frederick P. Humphreys, to be erected here, to cost \$50,000. The architect will take bids about August 25.

HASBROUCK HEIGHTS, N. J.—H. Fritz, architect, 237 Main av, Passaic, N. J., has completed plans for four frame residences at this place for C. William Collings, Hasbrouck Heights, N. J., to cost about \$4,500 each.

SCHOOLS AND COLLEGES.

RARITAN, N. J.—C. W. Eilenberg, Hampton, N. J., was low bidder at \$25,211 for the public school to be erected here for the Board of Education of Raritan, C. Tappen, clerk, Raritan Township, at a cost of about \$30,000. P. C. Van Nuys, Main st, Sommerville, N. J., architect.

STABLES AND GARAGES.

STABLES AND GARAGES.

RED BANK, N. J.—Work has been started on alterations to the stable on Tower Hill for Andrew Freedman, 534 5th av, Manhattan, from plans by John H. Duncan, 347 5th av. Harry G. Borden, Shrewsbury, N. J., is general contractor. Estimated cost, \$15,000.

MISCELLANEOUS.

PLAINFIELD, N. J.—The joint municipalties of Plainfield, North Plainfield and Dunellen, James T. McMurray, 151 North av, Plainfield, chairman of committee, will advertise for bids about September 15, for 4 miles of 42 inch piping disposal plant, gravity system, special automatic machinery to be used in the sewerage disposal plant system at Darling Farm. George W. Fuller, 170 Broadway, Manhattan, engineer. Estimated cost, \$400,000.

Other Cities.

CHURCHES.

CHURCHES.

WATERTOWN, N. Y.—Norman B. Hayes, 1106 Academy st, Watertown, has completed preliminary plans for a 1-sty brick and stone church and Sunday school, on Arsenal st, for the Bethany M. E. Church, Rev. Charles T. Holcolme, pastor, 222 West Lynde st, Watertown; W. J. Greer, chairman Building Committee, 205 Arsenal st, Watertown. Estimated cost is about \$40,000.

is about \$40,000.

BUFFALO, N. Y.—The Church of the Immaculate Conception contemplates the erection of a brick addition to its edifice at Edward st and Elwood av. Max Beierl, 405 German-American Bank Building, is architect. Rev. Father Donohue, pastor, is in charge.

PERSONAL AND TRADE NOTES.

A GREAT LOCKOUT on the buildings trades of Great Britain is reported from London to be

impending.

DR. CHARLES W. BERRY, of Brooklyn, N. Y., has recently been appointed Sanitary Supervisor of the New York State Department of Health at a salary of \$4,000 per year.

CHARLES A. ANDRES, formerly of the Hale & Kilburn Company, in the sales department, is now connected with the Reliance Fireproof Door Company, Milton and West sts, Brooklyn.

LOUIS E. EDEN, M. E., formerly connected with Cass Gilbert, architect, 11 East 24th st, has opened offices at 1 Madison av, where he will practice as a steam, electric and sanitary engineer.

BERTRAM G. GOODHUE, architect, 2 West 47th st, has been selected to prepare the plans for the New York City Building at the Panama-Pacific Exposition. The building will be 120x160 feet and will cost \$50,000.

R. L. VANIMAN, formerly associated with Starrett & Van Vleck, architects, has been ap-pointed associate engineer and Western repre-sentative of Percival Robert Moses, 366 5th av. His office will be located in Vancouver, B. C.

HARRY J. MARKS, manager of New York office of the American Engine & Electric Co., 90 West st, has been promoted to the position of sales manager of the company. His time will be divided between the New York office and the home office at Bound Brook, N. J.

THE CHESTNUT RIDGE WHITE BRICK COMPANY, formerly of 122 West 42d st, has opened attractive offices in the Keen Building, West 45th st at 5th av. It will take possession today. The company occupied its former offices for twelve years.

RALPH ADAMS CRAM, formerly of the firm of Cram, Goodhue & Ferguson, architects, has been appointed Senior Professor of Architecture in the Massachusetts Institute of Technology. This chair was recently vacated by the resignation of James Knox Taylor.

ALFRED D. FLINN, department engineer of the Board of Water Supply of New York City and formerly managing editor of the Engineer ing Record, has been appointed deputy chie engineer to succeed Col. Merritt H. Smith, when was recently made the chief engineer of the de partment

partment.

COMMISSIONER JOHN T. FETHERSTON'S plan for a model street-cleaning district has received the endorsement of the Merchants' Association. The initial cost for establishing the proposed model district will be \$253,000. This expenditure, it is estimated, will result in an annual saving of \$50,000 in maintenance charges

JOSEPH T. RYERSON & SON announce that it has established warehouses in St. Louis for the greater convenience of their customers requiring finished steel. It has taken over the plant, merchandise, equipment and good will of the W. G. Hagar Iron Company of St. Louis. It

will be conducted, according to the formal an-nouncement just sent out, as an independent, well equipped steel warehouse.

THE INSIDE IRONWORKERS currently reported to be striking for better wages and hours are merely trying to organize into a union. There are already two unions of inside workers, but they do not include the workmen now taking action. The leaders report that their demands are being conceded, and that building operations are not appreciably affected. Only the shops south of 25th street are involved.

ed. Only the shops south of 25th street are involved.

HARRY BURDETT has resigned as secretary and treasurer of F. A. Burdett & Co., Inc., consulting engineers, of New York City, with whom he has been associated for nine years, and with W. C. Couch and William P. Rand has opened offices at 303 5th av under the firm name of Burdett, Couch & Rand for the practice of architectural and structural engineering. Mr. Couch has been engaged in structural engineering work for fifteen years, the greater part of that time with Post & McCord, of New York City, Fort Pitt Bridge Works, of Pittsburgh, and F. A. Burdett & Co. Mr. Rand has been engaged in engineering work for fourteen years with the Boston Steel & Iron Co.

engaged in engineering work for fourteen years with the Boston Steel & Iron Co.

JOSE BERRE KING, head of the firm of J. B. King & Co., leading plaster manufacturers, of No. 1 Broadway, who died April 22, 1913, left a total estate of \$1,531,862, according to a transfer tax appraisal filed this week. The net value was fixed at \$1,290,509. Mrs. Louise W. King, widow, of London, received all personalty, value at \$4,321, and an annuity of \$30,000. Edward D., David W., Elsie, Emma and Mary King, children of Mr. and Mrs. King, each received the income from \$196,869. On the death of their mother they will divide equally the principal of the trust set aside to pay the annuity to Mrs. King. Mr. King owned no realty in New York State. The works of J. B. King & Co., located on Staten Island, manufacture plaster board, plaster of paris and cement. The 4,000 shares of stock held by Mr. King represents two-thirds of the entire stock. Subsidiary companies are J. B. King Transportation Company, Gypsum Packet Company, Newport Plaster and Mining Company, Newport Plaster and Mining Company, Windsor Cement Company and the Muralo Company.

SECRETARY HELMS of the Advisory Council of Real Estate Interests left town yesterday for a vacation which he will spend yachting on the New England coast with John Hays Hammond and a party of friends.

OBITUARY

CHARLES E. COLTON, one of the foremost architects of Syracuse, N. Y., and well known throughout the central part of New York State, died at his home in Syracuse, Saturday, July

JOHN M. CROLY, general contractor, died at his home in Great Neck, L. I., Wednesday, July 22. He was twenty-seven years old and had been interested in the building business with his father.

THOMAS MARTIN WEEKS, well-known builder and contractor, of Brooklyn, died at his home, 6 7th av, July 28. He was born at Oyster Bay, L. I. fifty-nine years ago, and had lived in Brooklyn for the last eighteen years. He is survived by his widow and four daughters.

He is survived by his whow and four daughters.

JOHN BENSON PRESCOTT, an iron manufacturer, died suddenly Tuesday, July 28, at his home, in Webster, Mass., of heart disease. Mr. Prescott was founder of the J. B. Prescott & Son Foundries in Webster and Douglas, Mass. He retired ten years ago. He was a thirty-third degree Mason and is survived by his widow, a daughter and a son.

by his widow, a daughter and a son.

HORACE CROSBY, civil engineer, died suddenly of heart disease, at his home in New Rochelle, N. Y., Friday, July 24. He was seventy-six years of age and had practiced his profession for many years. During his activity as an engineer, Mr. Crosby laid out many of the exclusive sections of New Rochelle and all of Pelham Manor. His assessment map, which is in use in the Department of Assessments and Taxation of New Rochelle, has been adopted by many other communities. He was at one time president of the Board of Education and president of the Public Library Board of New Rochelle. It was through him that the New Rochelle Public Library was founded. He is survived by his widow, one son and three daughters.

TRADE AND TECHNICAL SOCIETY EVENTS.

THE AMERICAN MUSEUM OF SAFETY will hold its annual dinner at the Waldorf-Astoria Friday evening, December 11.

Friday evening, December 11.

CONVENTION OF CITY MANAGERS will be held at Springfield, Ohio, August 4-6. C. E. Ashburner, Springfield, Ohio, secretary.

SECOND INTERNATIONAL EXPOSITION OF SAFETY AND SANITATION will be held at the Grand Central Palace, N. Y. C., December 12 to 19, 1914. This exposition is held under the auspices of the American Museum of Safety, and according to present plans will surpass the very successful exhibition held at the same place last year.

last year.

SOCIETY FOR ELECTRICAL DEVELOP-MENT, INCORPORATED, announces, eight prizes for the best stories, articles or reports on any subject pertaining to commercial electricity. The competition is open to employees of members of the Society. There will be one prize of \$250, one of \$150, one of \$50 and five of \$10 each. The competition closes on September 1, 1914. Full particulars may be obtained by writing to the Competition Editor, Society for Electrical Development, Incorporated, 29 West 39th st, New York City.

RECENT INCORPORATIONS.

J. B. SHAW & CO. has been chartered with \$10,000 capital stock to manufacture and install hardwood floors and fancy floorings, with offices in Manhattan. The directors are Alfred Abrams, 50 North st, Mt. Vernon; John H. Martin, 300 Hemmock st, and John E Shaw, 904 Sterling pl, both of Brooklyn. Lewis & Lewis, 50 Court st, Brooklyn, attorneys.

F. L. REALTY CORPORATION is a \$10,000 company chartered to do a realty business, with offices in Manhattan, with Max L. Schallek, 808 West End ay; Jos. M. Herzberg, 3495 Broadway, and Julia R. Roth, 145 Lenox av, as directors. Strasbourger, Eschwege & Schallek, attorneys.

PATTERSON & DULA have filed incorporation papers as architects and contractors and to manufacture building materials with \$10,000 capital stock with offices in Manhattan. Chas. A. Gill and Robert L. Dula, both of Tarrytown, N. Y., and Chester A. Patterson, New Rochelle, N. Y., directors. W. R. Perkins, 200 5th av, attorney.

capital stock with offices in Manhattan. Chas. A. Gill and Robert L. Dula, both of Tarrytown, N. Y., and Chester A. Patterson, New Rochelle, N. Y., directors. W. R. Perkins, 200 5th av, attorney.

MANHATTAN AVENUE REALTY CORPORATION has been incorporated with \$5,000 capital stock with offices in Manhattan to do a realty, construction, contracting, general roofing, manufacturing cornices and roofs business. The directors are Abraham Kaplan, 356 West 145th st, Joshua Hammel and Jack Milburg, both of 12 West 103d st. Powers & Kaplan, 154 Nassau st, attorneys.

UP-TO-DATE BUILDING CO. has been chartered with \$10,000 capital stock with offices in Brooklyn to do a realty, construction and contracting business. The directors are Parke L. Woodward, 154 Nassau st, Henry H. Merritt, 106 Murray st, Geo. Van Orden, 154 Nassau st. Park L. Woodward, 154 Nassau st, attorney.

WYONBAY HOLDING CO. is a \$10,000 company chartered to do a realty and construction business with offices in Brooklyn. The incorporators are Rachel Melnick, 318 East 8th st, Annie Topp and Isaac Topp, both of 671 Glenmore av, Brooklyn. S. A. Telsey, 44 Court st, Brooklyn, attorney.

M. WHITELAW & CO. have filed incorporation papers to do general construction and contracting business with offices in Manhattan. The directors are Louis Whitelaw, 45 John st, Max Whitelaw, 26 East 116th st, Simon Wiesenberg, 79 East 108th st. Louis Rosenberg, 116 Nassau st, attorney.

TRI-CHESTER IMPROVEMENT CO. has been incorporated with \$20,000 capital stock to do a realty and construction business with offices in The Bronx. The directors are Wm. Buhl, 1940 McGraw av, Jos. Wormser, 234 Willis av, and Wm. C. Koechling, 1941 Benedict av. Wm. Buhl, 1nc., 1940 McGraw av, attorney.

THE FLOY REAL ESTATE Co. is a \$15,000 company chartered with offices in Manhattan to do a realty, building, contracting and dealing in building material business. Frederic H. Floy, Henry Floy, Grace S. Floy, all of 165 Broadway, and two others, directors. Tallmadge & Foster, 257 Broadway, attorneys.

Must Replace Steam Pipes.

The New York Steam Company has been ordered by the Public Service Commission to gradually replace their present antiquated mains with a more modern type, designed to minimize the troubles which have been a source of numerous complaints in the past. The steam companies were placed under the jurisdiction of the commission in 1913, and since that time the commission has made an exhaustive investigation into and since that time the commission has made an exhaustive investigation into the methods of operations of this company. It was testified at the various hearings, held by Commissioner Milo R. Maltbie, that the heat from the steam pipes caused thousands of dollars' damage yearly. Asphalt is frequently melted, and this results in injury to the waterproofing of subways. Pavements have been ruined by the heat; and it is difficult for men to work in manholes in the vicinity of the steam pipes. Temdifficult for men to work in manholes in the vicinity of the steam pipes. Temperatures of the ground were reported as high as 220 degrees. The company now has 14,567 feet of mains of the modern style construction out of a total of 73,553. The commission's order required that 58,986 feet of the old style be replaced by the modern type at the rate of not less than 12,000 feet a year, beginning September 1, 1914.

Concrete roads and pavements con--Concrete roads and pavements consumed 1,750,000 barrels of cement in 1912 and 4,200,000 barrels in 1913, according to the Universal Portland Cement Co. This amount of cement would build a 16-foot concrete road, considerably farther than from New York to Chicago.

AND SUPPLIES MATERIALS BUILDING

SHORTAGE OF SUPPLY AND FREER BUYING STIFFEN LINSEED OIL AND STRUCTURAL STEEL QUOTATIONS-BRICK EASY

Current Prices of All Basic Building Commodities—War Opinion Divided

INSEED oil jumped in price to 60 Cents plus per gallon this week, a total gain of six cents in a fortnight, thus leading every other department of the building material market in price improvement. Heavy buying by shorts and continued depressing reports of the linseed crop were important factors in the East. There are prospects that a still further advance will be reported. Many heavy users of linseed oil are known to have light supplies in hand, and with the prospect of foreign supplies being shut off by reason of the martial state of affairs on the continent, there is reason, according to well-informed interests, to believe that quotations will move up much farther before harvest time arrives.

Common brick prices close the first month in the second half of the year practically at the same basis at which they entered it. The Greater New York Brick Company has just finished a count of the supply in sheds along the Hudson and estimated the number in dealers' hands in the district. The figures seem to indicate that, like the cement market, the over-production has been brought nearer to basic market requirements, through the policy of restricted shipment, so that within the next thirty days there may be a change in quotations upward. Raritan common is firm at \$5.50 to \$5.75 and \$6.25 to \$6.75 yard, Newark, Hudson common is quottotal gain of six cents in a fortnight, thus leading every other department of

yard, Newark, Hudson common is quot-

ed now at \$5.25 to \$5.75, wholesale dock,

Other commodities are nervous on lists. Structural steel is being fairly well taken at the new 1.31c level. There is talk of advancing the price another \$1 west of Pittsburgh and if this is done there may be another slight advance at tidewater, New York.

August lumber lists will show a slight advance in hardwoods, yellow pine, spruce and hemlock. Lath probably will remain stationary. The advance is expected to be \$2 on oak, maple and yellow pine. Spruce is expected to advance a dollar on Eastern Pennsylva-

This change is due to curtailment of production and a general tightening in market demand. The approach of the fall buying season is also partly responsible for the uplift. Credits probably will continue to be liberal to free buy-

Building plan filings in the five boroughs during the week ended 3 P. M. yesterday compared with those filed last week follow:

		Week	Endin	g,

COMMON BRICK.

Sales Exceeded Receipts on Wholesale Market—Rain Checks Riding.

Market—Rain Checks Riding.

WHILE sales exceeded in volume arrivals of common brick on the wholesale market this week, rain cut down the total of brick unloaded from barges to jobs as reported by the Greater New York Brick Company, almost a million and a half. Prices are steady and the demand seems to be gradually getting back to normal. Official transactions for Hudson River brick covering the week ending Thursday, July 30, in the wholesale market, with comparison for the corresponding period last year, and a comparative statement of Hudson brick unloaded from barges for consumption here, follow:

LINSEED OIL STILL HIGHER. Advance Has Reached 6 Cents A Gallon

w Italian Reached 6 Cents A Gallon in Last Fortnight.

W ITH a total increase in loss than a fortnight in the price of linseed oil, that commodity closed in a very firm position yesterday afternoon at 60 @— and linseed cake at \$29 and \$29.50.

noon at 60 @— and linseed cake at \$29 and \$29.50.

The buying movement here has improved considerably, but the price uplift has been mainly attributed to scarcity of supply in the West. Toward the middle of the week, when the 60-cent level was reached, paint interests appeared to have come to the conclusion that there was something more than mere market manipulation that was forcing prices up and, in view of the war clouds that were then gathering abroad, paint and other manufacturers using any quantity of this commodity deemed it advisable to come in for supplies more aggressively. The linseed crop will be moderate and there were some in the trade who were ready to venture an opinion that the market is in for some of the highest prices ever known in the linseed oil market. The more conservative, however, admitted that the top probably had not yet been reached.

IRON AND STEEL. Drop in Structural Orders Noticeable in

Drop in Structural Orders Noticeable in Last Few Days.

SENTIMENT in the structural steel market this week was vacillating. Opinion was divided regarding the effect the menacing status of Continental Europe would have upon the domestic steel market,

The Journal of Commerce, in a survey it made of the local market, discovered a significant feature in the mid-week market in the fact of the impossibility of obtaining British charters for transportation of steel products from Europe. It pointed out that recently there has been a fair export trade and the leading interests anticipate a further increase if the movement of freight is not seriously interfered with by political developments abroad.

The response to the recent advance in the price of bars and plates was reported to be satisfactory to the mills in the Pittsburgh district than to those in the East and another advance of \$1 is being talked of for interior points. Rallroads continue to be active buyers of plan material for shop work.

CURRENT WHOLESALE PRICES.

C URRENT wholesale prices prevailing on the Bullding Material Exchange and elsewhere in the Metropolitan district at the close of the last quarter, are as follows: In each case the quotations given below were those prevailing up to noon, July 31, 1914.
